4DLCD-50800480-[RTP/CTP]-[CLB]

5.0” TFT Liquid Crystal Display

DATASHEET

Document Date: 19th January 2019
Document Revision: 1.0

Revision History

REVISION	DATE	COMMENT	REMARKS
1.0	19/01/2019	Initial Version	Initial Version

Table of Contents

1. General Specification

4DLCD-50800480 is a colour active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a colour TFT-LCD panel, driver IC, FPC and a back light unit and with/without a Resistive/Capacitive Touch Panel (RTP or CTP), and with/without a Cover Lens Bezel (CLB). The module display area contains 800 x 480 pixels. This product accords with RoHS environmental criterion.

ITEM		CONTENTS	UNIT
LCD Type		TFT / Transmissive / Normally white	
Size		5.0	Inch
Viewing Direction		12:00 (without image inversion)	O'Clock
Gray Scale Inversion Direction		6:00	O'Clock
LCD (W × H × T)	4DLCD-50800480	120.70 x 75.80 x 2.9	mm
	4DLCD-50800480-RTP	120.70 x 75.80 x 4.10	
	4DLCD-50800480-CTP	120.70 x 75.80 x 4.55	
	4DLCD-50800480-CTP-CLB	140.70 x 93.83 x 4.54 (Including CLB)	
Active Area (W × H)		108.00 × 64.80	mm
Dot Pitch (W × H)		0.135 × 0.135	mm
Number of Dots (Pixels)		800 (RGB) × 480	
Driver IC		Source: ILI6122 Gate: ILI5960	
Backlight Type		12 LEDs	
Surface Luminance	4DLCD-50800480	500 (typical)	cd/m^2
	4DLCD-50800480-RTP	400 (typical)	
	4DLCD-50800480-CTP	475 (typical)	
	4DLCD-50800480-CTP-CLB	475 (typical)	
Interface Type		Parallel RGB 24-bit	
Color Depth		16.7M	
Pixel Arrangement		RGB Vertical Stripe	
Surface Treatment		AG	
Input Voltage		3.3 (typical)	V
With/Without TP (Touch Panel)		4DLCD-50800480 – Without TP 4DLCD-50800480-RTP – With Resistive Touch 4DLCD-50800480-CTP – With Capacitive Touch 4DLCD-50800480-CTP-CLB – With Capacitive Touch and Cover Lens Bezel	
Weight	4DLCD-50800480	55.2	g
	4DLCD-50800480-RTP	74.6	
	4DLCD-50800480-CTP	82.0	
	4DLCD-50800480-CTP-CLB	98.6	

Note 1: RoHS compliant
Note 2: LCD weight tolerance: ± 5%.

Part Number Details:

4DLCD	4D Systems LCD Display
50800480	5.0 inch, 800 x 480 Resolution
RTP	Resistive Touch
CTP	Capacitive Touch
CLB	Cover Lens Bezel

9. Backlight Characteristics

PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT
Voltage for LED backlight	V_l	-	3.2	3.4	V
Current for LED backlight	I_l	-	40	60	mA
LED Life Time	-	30000	-	-	Hrs

Note: The LED life time is defined as the module brightness decrease to 50% original brightness at Ta=25°C.

Note 1: Contrast Ratio(CR) is defined mathematically as below, for more information see Figure 1.

$$\text{Contrast Ratio} = \frac{\text{Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}{\text{Average Surface Luminance with all black pixels (P1, P2, P3, P4, P5)}}$$

Note 2: Surface luminance is the LCD surface from the surface with all pixels displaying white.
For more information, see Figure 2.

Lv = Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)

Note 3: The uniformity in surface luminance δ WHITE is determined by measuring luminance at each test position 1 through 5, and then dividing the maximum luminance of 5 points luminance by minimum luminance of 5 points luminance. For more information, see Figure 2.

$$\delta \text{ WHITE} = \frac{\text{Minimum Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}{\text{Maximum Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}$$

Note 4: Response time is the time required for the display to transition from white to black (Rise Time, Tr) and from black to white (Decay Time, Tf). For additional information see FIG 1. The test equipment is Autronic-Melchers ConoScope series.

Note 5: CIE (x, y) chromaticity, the x, y value is determined by measuring luminance at each test position 1 through 5, and then make average value.

Note 6: Viewing angle is the angle at which the contrast ratio is greater than 2. For TFT module the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information, see Figure3.

Note 7: For viewing angle and response time testing, the testing data is based on Autronic-Melchers ConoScope series. Instruments for Contrast Ratio, Surface Luminance, Luminance Uniformity, CIE the test data is based on TOPCONs BM-5 photo detector.

Figure 1. The definition of response time

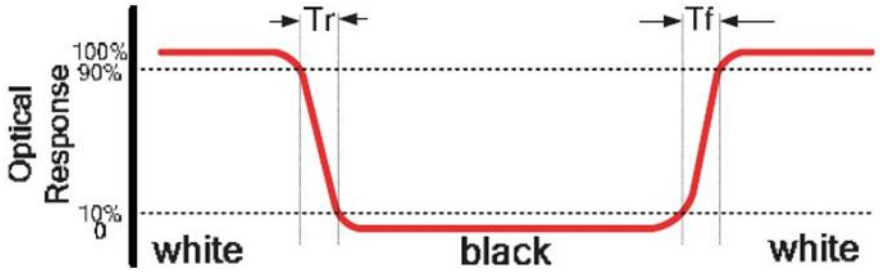

Figure 2. Measuring method for Contrast ratio, surface luminance, Luminance uniformity, CIE (x, y) chromaticity

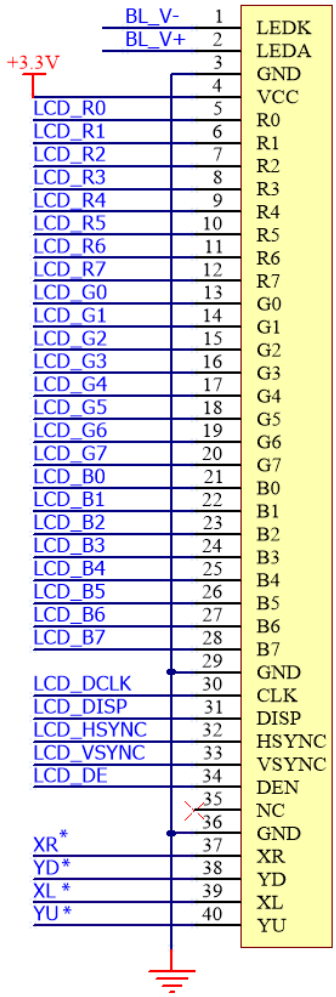
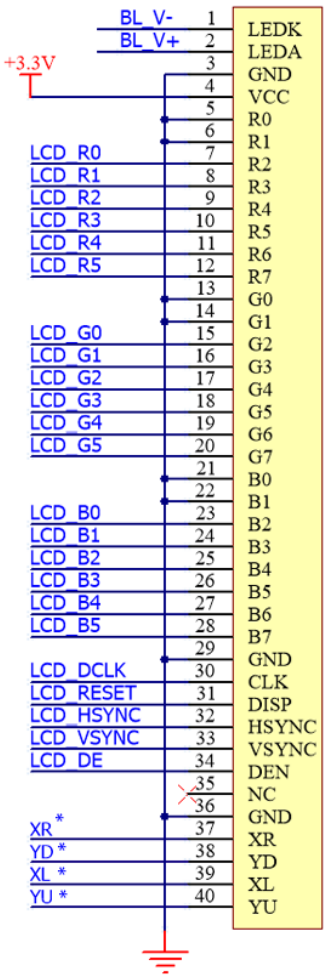
27	B6	Blue data input B6.	Note1
28	B7	Blue data input B7.	Note1
29	GND	Ground	
30	DCLK	Clock for input data. Data latched at rising/falling edge of this signal. Default is falling edge.	
31	DISP	Standby mode control.(Normally pull high) STBYB=”L”, enter standby mode for power saving. Timing controller source driver will turn off, all outputs are Hi-Z. STBYB=”H”, normal operation.	
32	HS	Horizontal sync input	
33	VS	Vertical sync input	
34	DE	Input data enable control. When DE mode, active High to enable data input(Normally pull low)	
35	NC	No Connect	
36	GND	Ground	
37	XR	The touch panel X right pin/ No Connection for Non- touch Version	Note2
38	YD	The touch panel Y down pin/ No Connection for Non- touch Version	Note2
39	XL	The touch panel X left pin/ No Connection for Non- touch Version	Note2
40	YU	The touch panel Y up pin/ No Connection for Non- touch Version	Note2

Note1: For applications that uses less than 24 bits, pins are tied to ground to reduce the total bits used.
Note2: Pins 37, 38, 39 and, 40 are only applicable to touch screen displays (4DLCD-xxxxxxxx-RTP/CTP).



24 Bit mode



18 Bit mode

10.2 CTP Interface

PIN No.	SYMBOL	DESCRIPTION	REMARK
1	NC	No Connect	Only connected to the CTP Panel, not connected to the LCD itself
2	NC	No Connect	
3	RST	Reset pin	
4	GND	Ground	
5	INT	Interrupt signal from CTP	
6	SDA	I2C SDA	
7	SCL	I2C SCL	
8	GND	Ground	
9	GND	Ground	
10	VDD	Power Supply (3.3V)	

The Capacitive Touch is driven by a **Focaltech FT5336** capacitive touch driver IC, which utilizes an I2C interface, and is capable of 5-point touch.

11. LCD Timing Details

11.1 Timing Chart

PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT	CONDITION
CLK Clock Time	T_{clk}	1/Max(F_{CLK})	-	1/Min(F_{CLK})	ns	-
CLK Pulse Duty	T_{chw}	40	50	60	%	T_{CLK}
HSYNC to CLK	T_{hc}	-	-	1	CLK	-
HSYNC Width	T_{hwh}	1	-	-	CLK	-

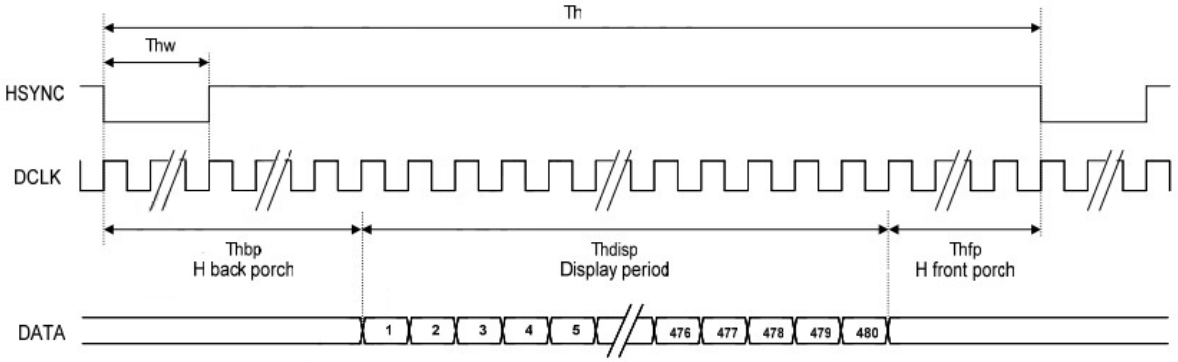
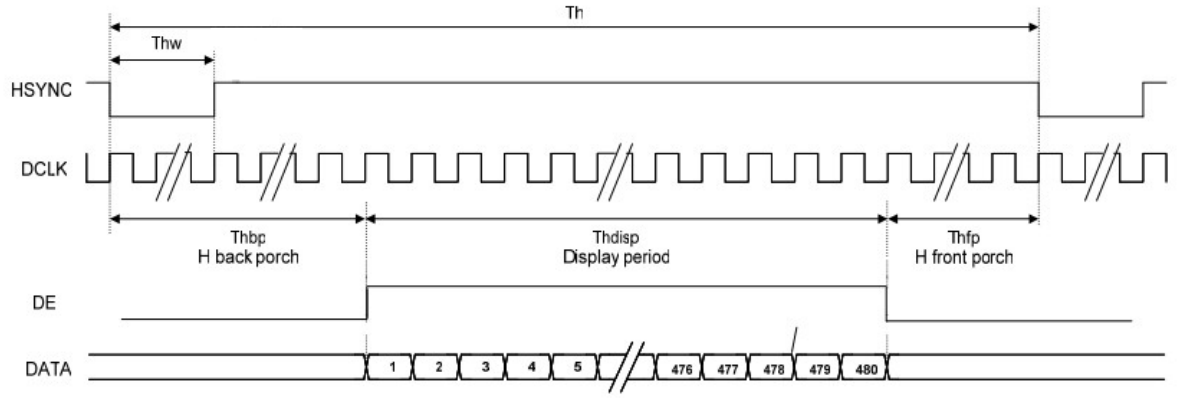
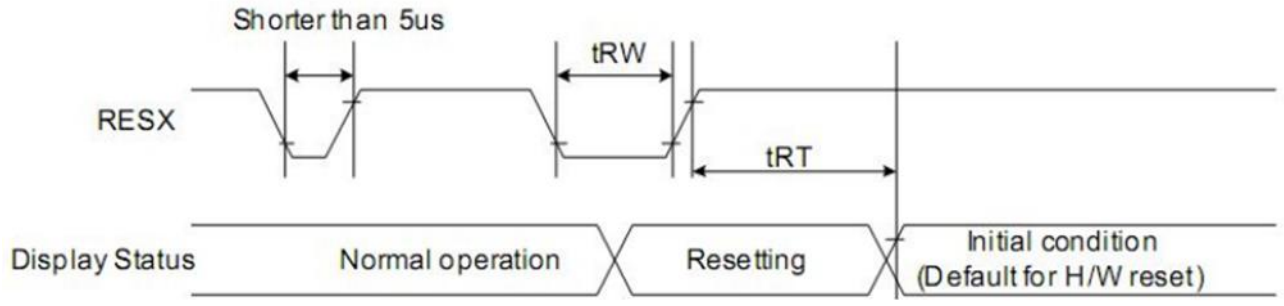
11.3 SYNC Mode Timing Diagram



11.4 SYNC-DE Mode Timing Diagram



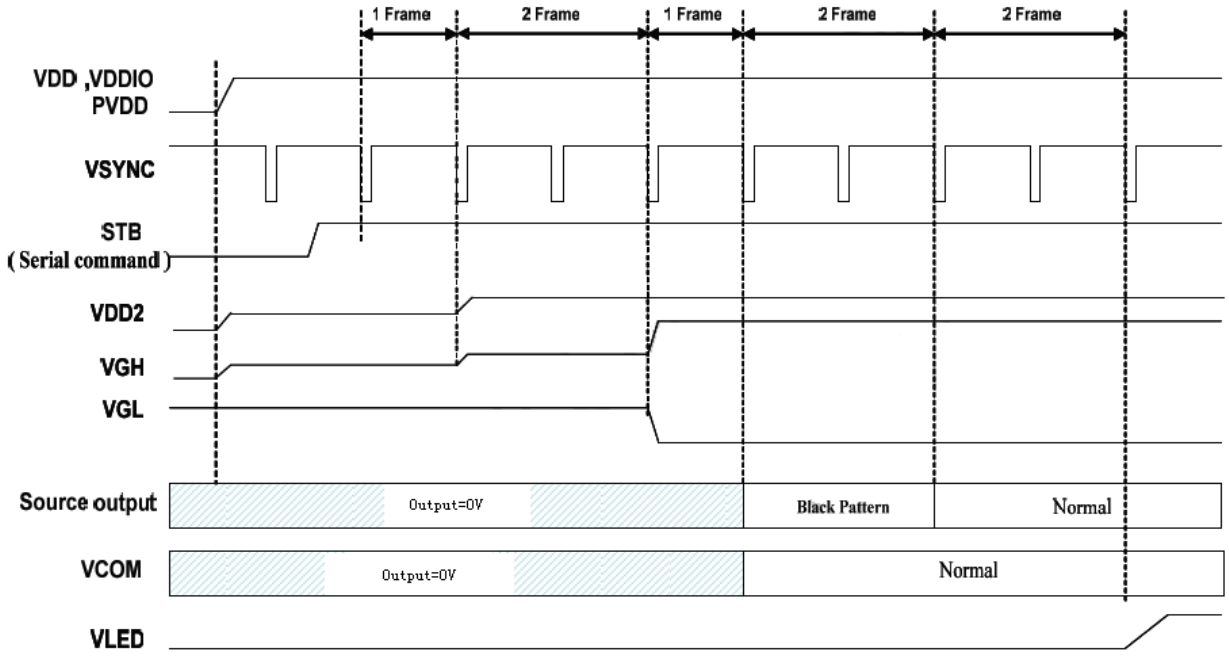
11.5 Reset Timing



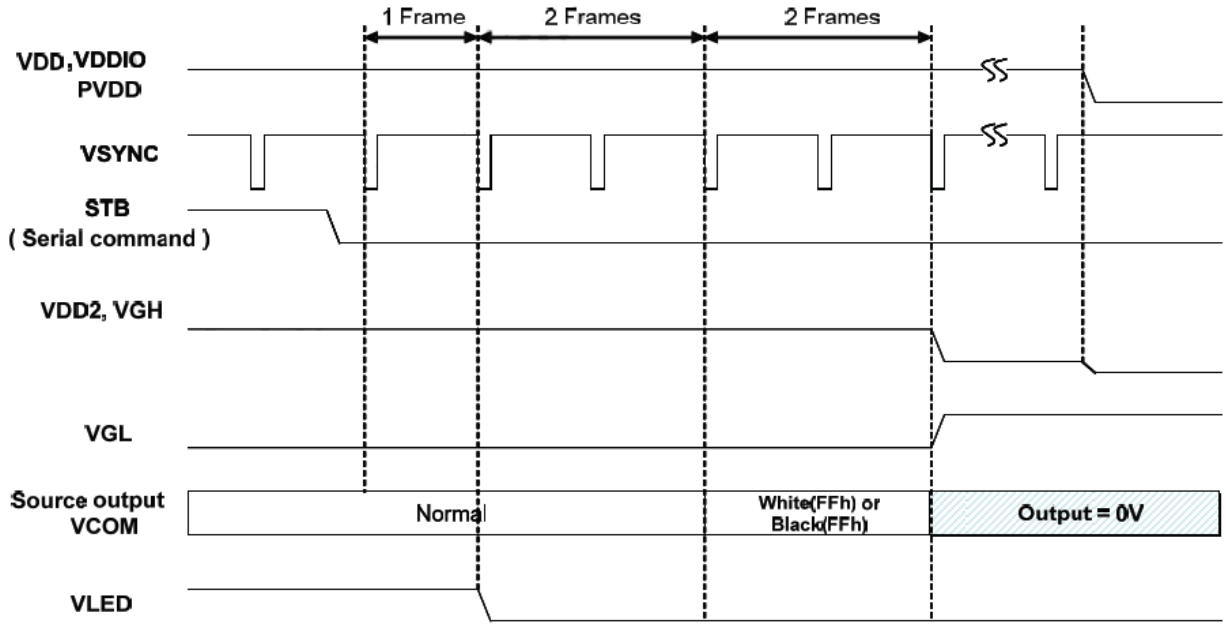
SIGNAL	SYMBOL	PARAMETER	MIN	MAX	UNIT
RESET	tRW	Reset low pulse width	40	-	us
	tRT	Reset complete time	-	5 (note1)	ms
			-	120 (note2)	ms

Note 1: When reset applied during SLPIN mode
Note 2: When reset applied during SLPOUT mode.

11.6 Power On Sequence



11.7 Power-off Sequence



Note:
When normally-black LC is used, please send black pattern to discharge the panel.
When normally-white LC is used, please send white pattern to discharge the panel

12. Reliability Test

No.	SYMBOL	TEST CONDITION	REMARK
1	High Temperature Storage	80℃±2℃ 96H Restore 2H at 25℃ Power off	After test cosmetic and electrical defects should not happen.
2	Low Temperature Storage	-30℃±2℃ 96H Restore 2H at 25℃ Power off	
3	High Temperature Operation	70℃±2℃ 96H Power on	
4	Low Temperature Operation	-20℃±2℃ 96H Power on	
5	High Temperature & Humidity Operation	60℃±2℃ 90%RH 96H Power on	
6	Temperature Cycle	-20℃←→25℃←→70℃ 30min 5min 30min After 10 cycles, restore 2H at 25℃ Power off	
7	Vibration Test	10Hz~150Hz, 100m/s^2, 120min	
8	Shock Test	Half-sinewave, 300m/s^2, 11ms	

13. Precautions for Using LCD Modules

13.1 Handing Precautions

- The display panel is made of glass and polarizer. The glass is fragile. It tends to be chipped during handling especially on the edges. Please avoid dropping or jarring. Please be careful not subject it to a mechanical shock by dropping it on impact.
- If the display panel is damaged and the liquid crystal substance leaks out, be sure not to get any of it in your mouth. If the substance contacts your skin or clothes, wash it off using soap and water.
- Do not apply excessive force to the display surface or to the adjoining areas since this may cause the color tone to vary. Do not touch the display with bare hands. This will stain the display area and degraded insulation between terminals (some cosmetics are determined by the polarizer).
- The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully. Do not touch, push or rub the exposed polarizer with anything harder than an HB pencil lead (e.g., glass, tweezers, etc.). Do not put or attach anything on the display area to avoid leaving marks on it. Condensation on the surface and contact with terminals due to cold temperature will damage, stain or contaminate the polarizer. After products are tested at low temperature they must be warmed up in a container before coming into contact with room temperature air.
- If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten the cloth with one of the following solvents
    - Isopropyl alcohol
    - Ethyl alcohol

  Do not scrub hard as it might damage the display surface.

- Solvents other than those mentioned above may damage the polarizer. Especially the following.
    - Water
    - Ketone
    - Aromatic solvents

  Wipe off saliva or water drops immediately, contact with water over a long period of time may cause deformation or color fading. Avoid contact with oil and fat.
- Take necessary precautions to minimize corrosion of the electrode. Corrosion of the electrodes is accelerated by water droplets, moisture condensation or current flow in a high-humidity environment.
- Install the LCD Module by using the mounting holes. When mounting the LCD module, make sure it is free of twisting, warping and distortion. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.
- Do not attempt to disassemble or process the LCD module.
- NC terminal should be open. Do not connect anything on it.
- If the logic circuit power is off, do not apply input signals.
- Control Electro-Static Discharge. Since this module uses a CMOS LSI, the same careful attention should be paid to electrostatic discharge as for an ordinary CMOS IC. To prevent destruction of the elements by static electricity, ensure that an optimum work environment is maintained.

- Before removing the LCM from its packing case or incorporating it into a set, be sure that the module and your body has the same electric potential. Be sure to ground your body when handling the LCD modules.
- To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions. To reduce the generation of static electricity, please ensure that the air in the work environment is not too dry. A relative humidity of 50%-60% is recommended. As much as possible, make the electric potential of your work clothes and that of the work bench the ground potential.
- The LCD module is coated with a film to protect the display surface. Be careful when peeling off this protective film since static electricity may be generated.

- Since the LCM has been assembled and adjusted with a high degree of precision, avoid applying excessive shocks to the module or making any alterations or modifications to it.
  - Do not alter, modify or change the shape of the tab on the metal frame.
  - Do not make extra holes on the printed circuit board, modify its shape or change the positions of components to be attached.
  - Do not damage or modify the pattern writing on the printed circuit board.
  - Absolutely do not modify the zebra rubber strip (conductive rubber) or heat seal connector.
  - Do not drop, bend or twist the LCM.

13.2 Storage Precautions

When storing the LCD modules, the following precautions are necessary.

- Store them in a sealed polyethylene bag. If properly sealed, there is no need for the desiccant.
- Store them in a dark place. Do not expose to sunlight or fluorescent light, keep the temperature between 0℃ and 35℃, and keep the relative humidity between 40%RH and 60%RH.
- The polarizer surface should not come in contact with any other objects. (We advise you to store them in an anti-static electricity container in which they were shipped. Some Liquid crystals solidify under low temperature (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subjected to low temperature.
- If the LCD modules have been operating for a long time showing the same display patterns, the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be regained by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.
- To minimize the performance degradation of the LCD modules resulting from destruction caused by static electricity etc., please avoid holding the following sections when handling the modules'
  - Exposed area of the printed circuit board
  - Terminal electrode sections

14. Legal Information

Proprietary Information

The information contained in this document is the property of 4D LCD Pty. Ltd.; these may be the subject of patents pending or granted, and must not be copied or disclosed without prior written permission.
4D LCD endeavors to ensure that the information in this document is correct and fairly stated but does not accept liability for any error or omission. The development of 4D LCD products and services is continuous and published information may not be up to date. It is important to check the current position with 4D LCD.

In no event shall 4D LCD be liable to the buyer or to any third party for any indirect, incidental, special, consequential, punitive or exemplary damages (including but without limitation to; lost profits, lost savings, or loss of business opportunity) arising out of or relating to any product or service provided or to be provided by 4D LCD, or the use or inability to use the same, even if 4D LCD has been advised of the possibility of such damages.
4D LCD products are not fault tolerant nor designed, manufactured or intended for use or resale as on line control equipment in hazardous environments requiring fail – safe performance, such as in the operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, direct life support machines or weapons systems in which the failure of the product could lead directly to death, personal injury or severe physical or environmental damage (‘High Risk Activities’). 4D LCD and its suppliers specifically disclaim any expressed or implied warranty of fitness for High Risk Activities.
Use of 4D LCD products and devices in 'High Risk Activities' and in any other application is entirely at the buyer’s risk, and the buyer agrees to defend, indemnify and hold harmless 4D LCD from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any 4D LCD intellectual property rights.
