GENERAL DESCRIPTION

The ADRF5026-EP is a nonreflective, single-pole, double-throw (SPDT) RF switch manufactured in a silicon process.

The ADRF5026-EP operates from 100 MHz to 44 GHz with better than 3.8 dB of insertion loss and 45 dB of isolation. The ADRF5026-EP features an all off control, where both RF ports are in an isolation state. The ADRF5026-EP has a nonreflective design and both of the RF ports are internally terminated to 50 Ω.

The ADRF5026-EP requires a dual-supply voltage of +3.3 V and –3.3 V. The device employs CMOS and low voltage transistor transistor logic (LVTTTL)-compatible controls.

The ADRF5026-EP is pin compatible with the [ADRF5027](#) low frequency cutoff version, which operates from 9 kHz to 44 GHz.

FUNCTIONAL BLOCK DIAGRAM

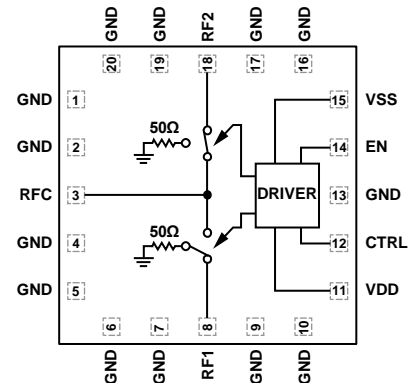

Figure 1.

The ADRF5026-EP RF ports are designed to match a characteristic impedance of 50 Ω. For ultrawideband products, impedance matching on the RF transmission lines can further optimize high frequency insertion loss and return loss characteristics. Refer to the [ADRF5026](#) data sheet for an example of a matched circuit that achieves a flat insertion loss response of 2.4 dB from 28 GHz to 43 GHz.

The ADRF5026-EP comes in a 20-terminal, 3 mm × 3 mm, RoHS compliant, land grid array (LGA) package and can operate from –55°C to +105°C.

Additional application and technical information can be found in the [ADRF5026](#) data sheet.

TYPICAL PERFORMANCE CHARACTERISTICS

VDD = 3.3 V, VSS = -3.3 V, VCTRL/VEN = 0 V or VDD, and T_{CASE} = 25°C in a 50 Ω system, unless otherwise noted.

Insertion loss is measured on the probe matrix board using ground-signal-ground (GSG) probes close to the RFx pins. Signal coupling between the probes limits the isolation performance of the ADRF5026-EP. Isolation is measured on the [ADRF5026-EVALZ](#) evaluation board. See the [ADRF5026](#) data sheet for details on the [ADRF5026-EVALZ](#) evaluation board and probe matrix board.

See the [ADRF5026](#) data sheet for a full set of Typical Performance Characteristics plots.
