General Description

The HMC952LP5GE is a four-stage GaAs pHEMT MMIC Medium Power Amplifier with a temperature compensated on-chip power detector which operates between 9 and 14 GHz. The amplifier provides 33 dB of gain and +35 dBm of saturated output power at 27% PAE from a +6V supply. With up to +43 dBm IP3 the HMC952LP5GE is ideal for linear applications such as point-to-point and point-to-multi-point radios or SATCOM applications demanding +35 dBm of efficient saturated output power. The RF I/Os are internally matched to 50 Ohms.

Electrical Specifications, $T_A = +25^\circ\text{C}$, $V_{dd1}, V_{dd2}, V_{dd3}, V_{dd4} = +6\text{V}$, $I_{dd} = 1400\text{ mA}$ [1]

[2] Circuit Board Material: Rogers 4350 or Arlon FR4

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
