| Part Number: | 8978202021 |
|------------------|-------------------------|
| Frequency Range: | Dimensions |
| Description: | 78 EFD CORE |
| Application: | Inductive Components |
| Where Used: | Closed Magnetic Circuit |
| Part Type: | EFD Cores |
| Genaric Name: | EFD20 |

Mechanical Specifications

Weight: 7.000 (g)

Part Type Information

EFD10, EFD12, EFD15, EFD20, EFD25, EFD30

EFD (Economical Flat Design) cores have been designed to maximize volume in a low profile geometry. EFD cores allow maximum throughput power density with reasonably low mass for board level installation.

-EFD cores can be supplied with the centerpost gapped to a mechanical dimension. -EFD cores can also be supplied to an AL value, these would be supplied in sets. Fair-Rite Products Corp. Your Signal Solution®

Preferred parts, the suggested choice for new designs, have shorter lead times and are more readily available.

The column H(Oe) gives for each bead the calculated dc bias field in oersted for 1 turn and 1 ampere direct current. The actual dc H field in the application is this value of H times the actual NI (ampere-turn) product. For the effect of the dc bias on the impedance of the bead material, see figures 18-23 in the application note How to choose Ferrite Components for EMI Suppression.

A ½ turn is defined as a single pass through a hole.

I/A - Core Constant

Ae: Effective Cross-Sectional Area

 A_{I} - Inductance Factor $\left(\frac{L}{N^{2}}\right)$

N/AWG - Number of Turns/Wire Size for Test Coil

I e: Effective Path Length

Ve: Effective Core Volume

NI - Value of dc Ampere-turns
