VERSALDEMO1Z

Demonstration Board

VERSALDEMO1Z is a power reference board designed in collaboration with Xilinx to provide full power rails for Xilinx Versal ACAP, including adaptable engines, AI engines and scalar engines, as well as external DDR memory.

Renesas power solutions for Xilinx Versal ACAP feature the ISL68225 digital multiphase controller and ISL99360 smart power stage for core power, as well as the ISL91211A multiphase PMIC and ISL85009 and ISL8026 DC/DC regulators for remaining power rails.

This orderable reference board serves both as a proven turnkey reference design for customers to jump start their design, as well as an evaluation platform for quick and easy power testing.

Key Features

- The ISL68225 digital multiphase controller and ISL99360 smart power stage provide a high efficiency Vcore solution over a wide load range.
- The ISL91211A power management IC (PMIC) solution provides a highly-integrated compact design for multiple Versal lower current rails.
- The DC/DC regulators provide complete solutions for the rest of the power needs by Versal.

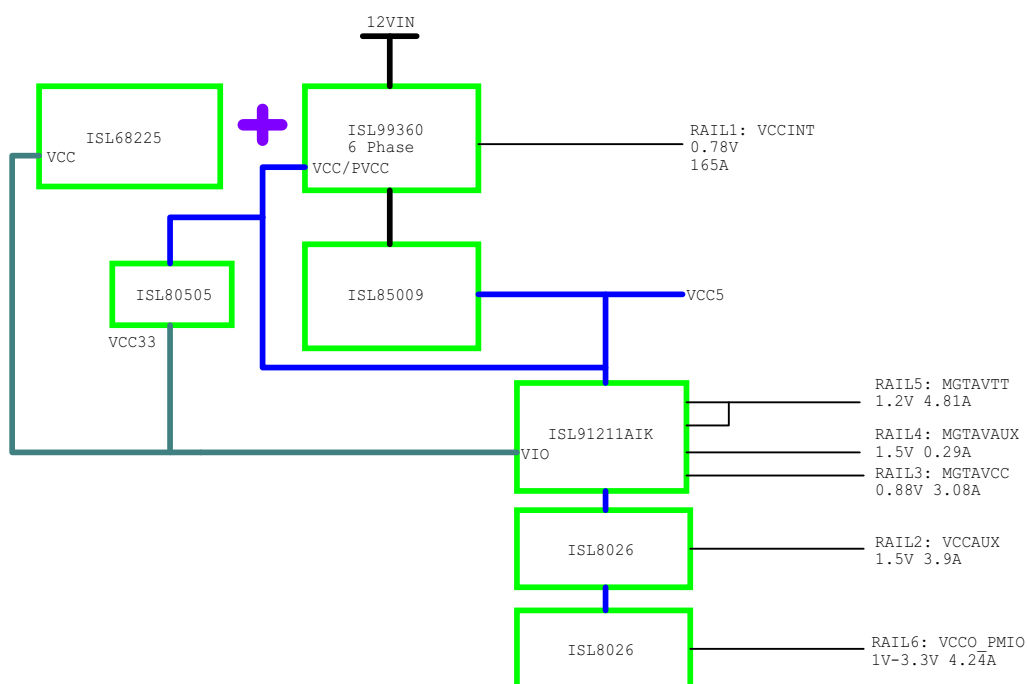

Figure 1. Block Diagram of Power Management Solution for the Renesas Reference Board

1. Functional Description

[Figure 1](#) presents the architecture of the Renesas power management solution employed in this reference board. This power solution is used to support user case 1 and user case 3 of the Xilinx Versal ACAP. As shown in Figure 1, this solution is based on a 12V input, which is a common input for main boards. There are six independent outputs provided by this solution, which is going to function as the Versal core power and bias supplies of other rails. Six output rails for Versal include VCCINT, VCCAUX, MGTAVCC, MGTAVAU, MGTAVTT, and VCCO_PMIO. This Renesas power management solution is composed by using all Renesas competitive parts, including digital multiphase controller, Smart Power Stage (SPS), Power Management IC (PMIC), and switching regulator.

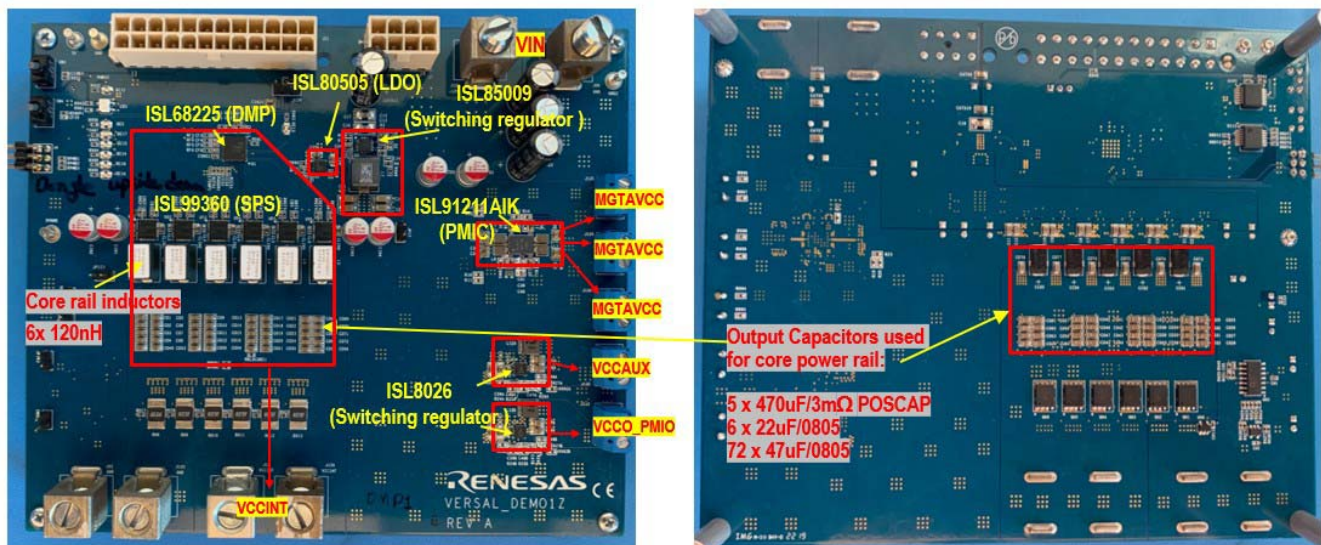

Figure 2. Top and Bottom View of Reference Board

1.1 Digital Multiphase Controller

The ISL68225 is a digital dual output multiphase ($X+Y \leq 9$) PWM controller supporting the PMBus V1.3 interfaces. Either of the outputs can be configured to support any desired phase assignments up to a maximum of nine phases across the two outputs ($X+Y$). For example, 8+1, 7+2, 6+3, 5+4, or a single output operation such as a 9+0 configuration are supported. This allows flexible scalability to support a wide range of load current. The ISL68225 use the Renesas proprietary digital synthetic current modulation scheme to achieve the industry-best combination of transient response, ease of tuning, and efficiency across the full load range. You can use the intuitive Renesas Power Navigator™ software to configure and monitor the device.

With minimal external components, easy configuration, robust fault management, and highly accurate regulation capability, implementing a high performance, multiphase regulator has never been easier.

In this reference board, the digital multiphase controller together with Smart Power Stage (SPS) from Renesas was used to create the VCCINT rail, which has a current rating of 165A. The 6+0 configuration is set as default, and it can be modified by dropping or adding phases per current adjustment or efficiency optimization purpose. The default output voltage of 0.78V can be reconfigured using PowerNavigator.

1.2 Smart Power Stage (SPS)

The ISL99360 is compatible with the ISL68xxx/69xxx Digital Multiphase (DMP) controllers. The ISL99360 has integrated high accuracy current and temperature monitors that can be fed back to the controller to complete a multiphase DC/DC system. They simplify design and increase performance by eliminating the DCR sensing network and associated thermal compensation. Light-load efficiency is supported through a dedicated LFET control pin. An open-drain fault reporting pin simplifies the handshake between the SPS and controllers and can disable the controller during start-up and fault conditions. Six ISL99360 are employed in this reference board and they are controlled and driven by ISL68225 to create the VCCINT rail.

1.3 Power Management IC (PMIC)

The ISL91211AIK is a 4-phase, three output programmable Power Management IC (PMIC) and has independently OTP programmable voltage settings for each output. This flexibility allows to support an expandable and optimized power supply from a Xilinx high-end product to a low-end product. It is optimized with highly efficient synchronous buck converters capable of multiphase and single-phase operations that can deliver up to 5A per phase continuous output current. The ISL91211AIK delivers a highly robust power solution by featuring a controller based on the Renesas proprietary R5 technology, which provides tight output accuracy and load regulation, ultra-fast transient response, seamless DCM/CCM transitions, and requires no external compensation. In this reference board design, ISL91211AIK is used to output three power rails, including the MGTAVCC rail by two phases in parallel, and the MGTAVAUX rail through one phase, and the MGTAVTT rail through another phase. The default output voltage of each rail can be reconfigured using PowerNavigator.

1.4 Switching Regulator

The ISL8026 is highly efficient, monolithic, synchronous step-down DC/DC converters that can deliver 6A of continuous output current from a 2.5V to 5.5V input supply. The devices use current mode control architecture to deliver a very low duty cycle operation at high frequency with fast transient response and excellent loop stability. The ISL8026 can be configured for discontinuous or forced continuous operation at light load. Forced continuous operation reduces noise and RF interference, while discontinuous mode provides higher efficiency by reducing switching losses at light loads. Two ISL8026 were employed to provide the VCCAUX rail and VCCO_PMIO rail separately.

1.5 Quick Start Guide

The Renesas USB to PMBus Adapter is used to connect the PMBus interface on reference board with a USB interface to a PC to reconfigure settings.

1.5.1 Default settings

This reference board can be powered up directly without using PMBus interface. In this case, there is no need on power navigator for just general powerup to reach default settings, as listed in Table I. The power solution can be reconfigured by using PMBus option as guided in next section.

Table 1. Default Setting for Rails

Rails	Default Output voltage	Current Rating	Switching Frequency
VCCINT	0.78V	165A	600kHz
VCCAUX	1.5V	6A	1MHz
MGTAVCC	0.88V	5A	2MHz
MGTAVAUX	1.5V	5A	2MHz
MGTAVTT	1.2V	5A	2MHz
VCCO-PMIO	1.5V	6A	1MHz

1.5.2 Startup Procedures

1. Connect DC power supply to input terminal (nominated at 12V). Please take care of the current rating of supply, and a DC supply able to output 15A at 12V would be needed if running test under continuous full load conditions of rails.
 2. Ensure the enabling switches (S3 and S4) are in the correct position.
 3. Check the output rails.
 4. Optional: Operation to follow when using the PMBus enable option
- Connect the USB Mini provided between the host computer and the USB to PMBus adapter.
 - Connect USB to PMBus adapter to demonstration board to test or evaluate.

- Apply input power (labeled VIN) to the demonstration board.
 - Download PowerNavigator from the Renesas website.
 - Follow the instructions on the website.
 - When PowerNavigator is installed, double-click on the PowerNavigator icon and follow the software's instructions. The [Power Navigator User Manual](#) can give you some details to start with, and you can find more than this on Renesas website. Please feel free to contact our engineer for support whenever needed.
5. Load transient test empowered by the reference board.

Figure 3. PMBus Dongle (Enabling Switches and the Header for Load Transient Test)

Note: The PMBus dongle is connected downside up.

This reference board has embedded circuits to allow load transient test on core power rail. An active load circuit with parallel connected MOSFETs can sustain a pulsed load current as high as 130A. In order to reduce the thermal rise while achieving enough duration of full load during load transient test for the loop getting optimized, a load step waveform with long period but small duty cycle is highly recommended. To run the active load circuit, make sure the two pins of header JP142 are shorted to each other. (This shorted connection should be removed for any efficiency measurements.) In general, a pulsed signal from signal generator can be given through JP143, and the regulated load current can be monitored through IMON. For every 1V applied to JP143, the on-board active load will draw about 100A. The load slew rate can be controlled by adjusting the applied signal edge rate. See the [VERSALDEMO1Z Circuit Schematics](#) for more details.

3. Test Results

The performance test results includes the Versal demonstration board power map, digital multiphase features, VCCINT results, and all other rails test results. See [Figure 2](#) for images of the reference board.

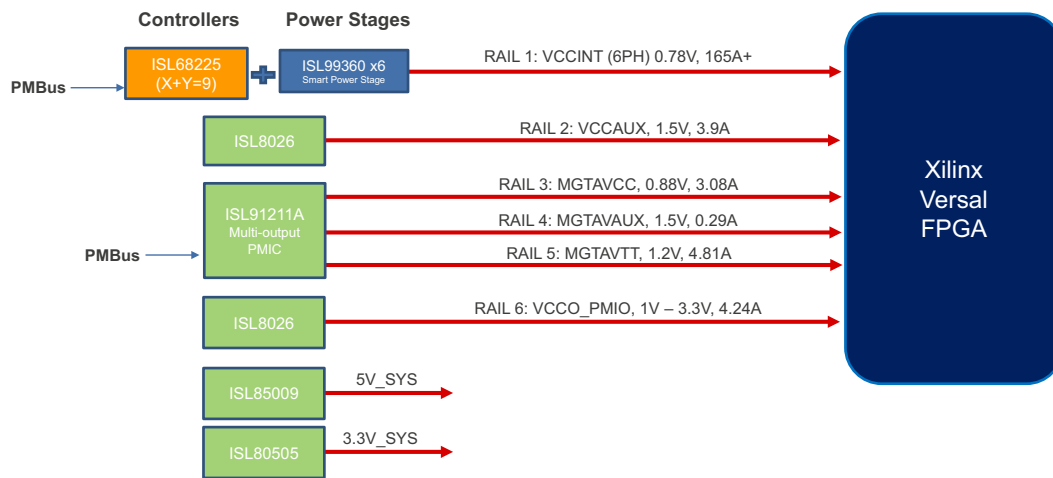

Figure 10. Power Map

3.1 Renesas Digital Multiphase Solutions

3.1.1 Digital multiphase controllers

- 50+ advanced digital multiphase controllers
 - Single, Dual, and Triple outputs
 - 2 to 20 phase support without phase doubler
- Support ANY CPU interface protocol
- Packages sizes from 4x4 to 8x8 QFN
 - 2-phase/ dual output in 32L 4x4mm QFN
 - 20-phase/dual output in 68L 8x8mm QFN

3.1.2 Industry leading performance

- Best-in-class transient response
- Excellent phase peak current management
 - Protects against inductor saturation without over design
- Industry first design support and debug tools
 - Serial interface packet logging: 1024 SVID command depth
 - Digital Test Bus: allows viewing of signals internal to the controller
 - Black Box: single point interface for fault diagnosis
- 48V conversion support
 - Common device characteristics and GUI

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
