SANMOTION F5
5-PHASE STEPPING SYSTEMS

The SANMOTION F5 is a 5-phase stepping system that provides precise positioning with easy control. The typical basic step angle is 0.72˚ , and accurate control is provided by pulse signals.

- **What is a stepping motor?**
  A stepping motor is a motor that rotates at a fixed angle for each pulse. The rotation speed is proportional to the speed of the command pulse (frequency). Also, the rotation angle can be controlled according to the number of command pulses.
  Stepping motors are able to make stable stops without vibrating, as they have holding power when the motor is stopped.

Application Examples

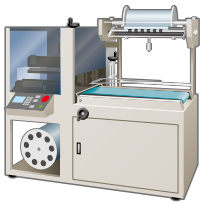
The SANMOTION F5 can be used in a wide variety of applications, including fixed-speed drive synchronized to a command pulse, accurate positioning, and stable stopping.

- Semiconductor devices, analytical and testing devices used in medical and environmental fields, ATMs, monitoring cameras and spotlights, packaging machines, embroidering machines, automatic ticket gates and more

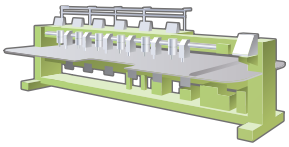
ATMs

Blood analyzers

Wafer cleaners



Food packaging machines



Embroidering machines

All model numbers in this catalog are compliant with the tolerances for specified toxic substances (cadmium, lead, mercury, hexavalent chromium, PBB, and PBDE) found in supplement II of the EU RoHS directive (2011/65/EU), as of the October 2012 production lot. Also, SANMOTION F5 drivers and motors whose model numbers start with “SM” feature standard specifications that are compliant with CE (European Norm) and UL standards.
AC input drivers also comply with the KC Mark standards.

AC input driver only

Downloaded from Arrow.com.

Lineup

Motor/driver sets are conveniently available in either AC or DC models.
DC models include microstep and full/half step drivers.
Beside the set models, stepping motors can be purchased independently.
The product line includes linear actuator stepping motors with straight line drives, and Stepping motor for vacuum environments.

Set Models ▶p. 9–

AC input (Microstep)

Harmonic gear models

This model employs harmonic gears for up to 1:100 resolution.
Motor size: 42 mm sq./60 mm sq./86 mm sq.
Reduction gear ratios: 1:30/1:50/1:100

Standard models

This is the basic model AC driver/motor set.
Standard specifications of both the driver and the motor are compliant with CE (European Norm) and UL standards.
Motor size: 42 mm sq./60 mm sq./86 mm sq.

Electromagnetic brake models

This set utilizes a non-excitation electromagnetic brake to maintain position in vertical load applications and hold load even during power off.
Motor size: 42 mm sq./60 mm sq./86 mm sq.

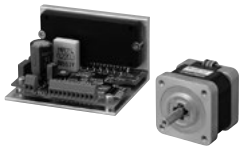
Low-backlash gear models

This set employs low backlash conically hobbed gears to engage the output stage of the speed reduction mechanism.
Motor size: 42 mm sq./60 mm sq./86 mm sq.
Reduction gear ratios: 1:3.6/1:7.2/1:10/1:20/1:30/1:36

Encoder models

Encoder models are equipped with an encoder (4000 P/R, 3-channel) and can monitor operating status such as position and speed. This simplifies determining causes of vibration and step-out.
Motor size: 42 mm sq./60 mm sq./86 mm sq.

DC input (2 types: microstep and full/half step)



Spur gear models

This set employs a spur gear in the speed reduction mechanism.
Motor size: 28 mm sq.
Reduction gear ratios: 1:3.6/1:7.2/1:10/1:20/1:30/1:50

Standard models

This is the basic model DC driver/motor set.
Motor size: 28 mm sq./42 mm sq./60 mm sq./86 mm sq.

Harmonic gear models

This model employs harmonic gears for up to 1:100 resolution.
Motor size: 28 mm sq./42 mm sq./60 mm sq./86 mm sq.
Reduction gear ratios: 1:30/1:50/1:100

Low-backlash gear models

This set employs low backlash conically hobbed gears to engage the output stage of the speed reduction mechanism.
Motor size: 42 mm sq./60 mm sq./86 mm sq.
Reduction gear ratios: 1:3.6/1:7.2/1:10/1:20/1:30/1:36

Electromagnetic brake models

This set utilizes a non-excitation electromagnetic brake to maintain position in vertical load applications and hold load even during power off.
Motor size: 42 mm sq./60 mm sq./86 mm sq.

Stepping Motors ▶p. 105–

Stepping Motors ▶p. 108–

When ordering a motor only, select from a variety of motor sizes.
A separate driver is required.
Motor size: 28 mm sq./42 mm sq./ 50 mm sq./60 mm sq./86 mm sq.

Linear Actuator Stepping Motors ▶p. 115–

This motor employs an integrated ball screw for linear motion.
A separate driver is required.
Motor size: 42 mm sq./60 mm sq.

Stepping Motor for Vacuum Environments ▶p. 117

We can customize motors for use in low to ultra-high vacuum environments to suit your system requirements.
A separate driver is required.

Set Models

AC Input Set Models ▶p. 12

DC Input Set Models ▶p. 52

Downloaded from Arrow.com.

Features

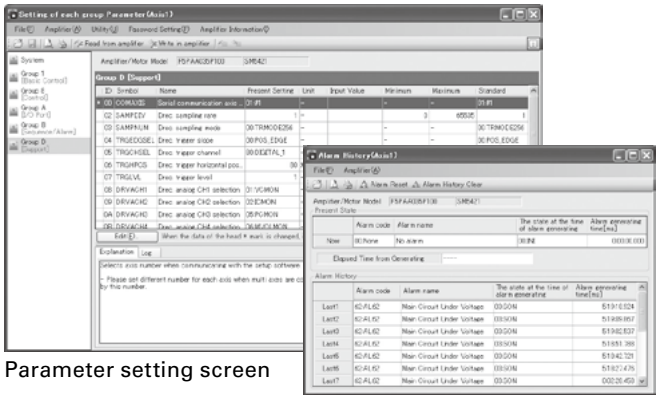
Low vibration AC DC

This driver features approximately 30% less vibration compared with our conventional product* (when used with an AC input driver).
Also, a low-vibration mode function provides smooth driving, even with one-division (full step) and two-division (half step) coarse resolution settings. This allows vibrations to be suppressed without control system restrictions.

For DC input, set models (microstep) only.

Settings possible with setup software AC

Setup software can be used with a personal computer to adjust control parameters, or to analyze alarms and operation status.



Parameter setting screen

Alarm log screen

Microstep drive AC DC

The basic step angle of 0.72˚ can be set to a resolution of up to 250 divisions in 16 levels. This allows for smooth operation with minimal vibrations.

For DC input, set models (microstep) only.

The AC input driver is equipped with an electronic gear function. Motor resolution can be set according to the ball screw pitch or gear reduction ratio.

High torque AC

Torque is increased by approximately 5%* when combined with our newly developed motors.
As output torque is the same for both 100 and 200 VAC input voltages, there is no need to change motors if power specifications change.

Compact size AC

This driver features a 29% reduction in volume compared with our conventional product*. This makes it easier to use in places where the setup space is limited.

Rich product lineup AC

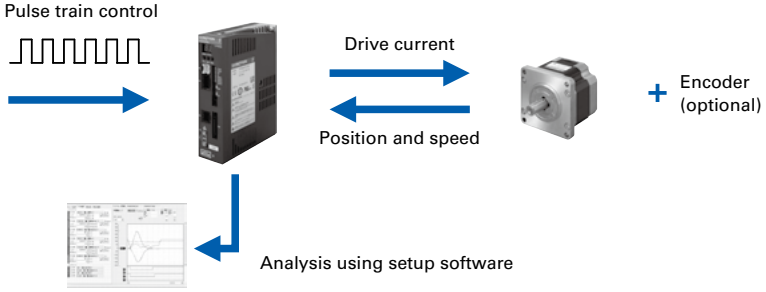
Motors with 4000 P/R high-resolution encoders, electromagnetic brakes, or gears are available as options.
The switch timing for motors with an electromagnetic brake is controlled automatically. An external power supply for the brake is unnecessary.

Analysis function and device startup support AC

Using an encoder with the motor makes it possible to monitor information such as the current position and speed. This simplifies determining causes of vibration and step-out.

Analysis mode

This mode is suited for device startup and alarm analysis.



*Compared with our conventional product, model number: FS1W075P00.

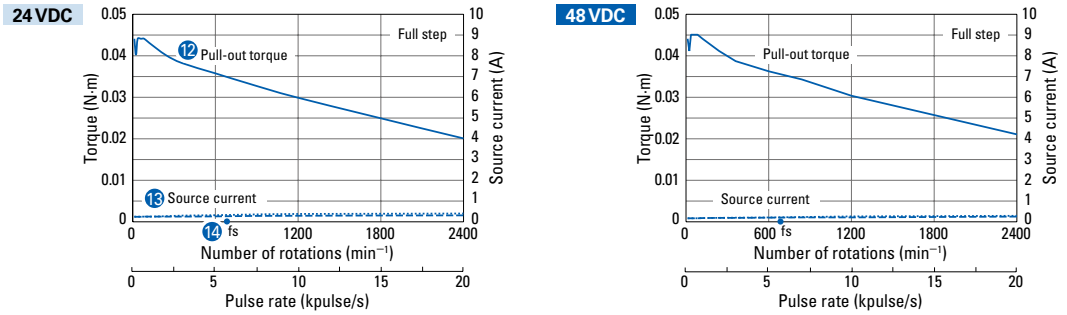
fs: Maximum self-start frequency when not loaded ●

FAF521S
FAF521D

Winding current: 0.75 A/phase



❶ Model number of the driver included in the set.

❷ When driving in full step mode, the basic step angle is the rotation angle with each pulse. When driving in half step mode, the motor rotates at half of the basic step angle.

❸ This is the rated current that flows to the motor winding.

❹ Size and length of the stepping motor included in the set.

❺ The set model number and the model number of the stepping motor included in the set. The model number for the stepping motor shaft varies for single shaft and dual shaft.

❻ This is the maximum torque that occurs when using 4-phase excitation at rated current, causing the shaft to rotate from the outside.

❼ This is the moment of inertia of the rotor.

❽ This is the mass of the stepping motor.

❾ This is the allowable load when applying a load to the shaft in the axial direction. Do not exceed this value when using this product.

❿ This is the allowable load when applying a load to the shaft perpendicular to the axial direction. Do not exceed this value when using this product.

⓫ This graph shows the relationship between the pulse rate (frequency), speed, and torque. The driver source current is shown in addition to the torque.

⓬ The pull-out torque is the maximum torque in which synchronized operation is possible for a certain command pulse. If a torque that exceeds this value is applied to the stepping motor, it will be unable to synchronize with the command pulse (Step-out). Thus, when selecting a motor, you should allow for a torque margin of 1.4 to 2 times, in order to avoid step-out.

⓭ This graph shows the current value for the power supply that supplies the driver.

- - - - - - - The blue dashed line shows the source current value when there is no load (motor by itself).

····· The blue dotted line shows the source current value when the maximum torque is applied to the stepping motor (during load).

The required power supply capacity (W) is calculated from this graph.

⓮ The blue-colored dots in the lower part of the graph show the upper limit for the self-start frequency (maximum self-start frequency: fs) of the stepping motor by itself (no load). The stepping motor will not operate normally if it is started using frequencies that exceed these values. For this reason, it is necessary to start the stepping motor using frequencies that are lower than these values. The maximum self-start frequency (f_L) which includes the load can be determined using the relational expression below.

$$f_L = \frac{fs}{\sqrt{1 + \frac{J_L}{J_M}}}$$

J_M : Rotor inertia
J_L : Load inertia
fs : Maximum self-start frequency when not loaded

Dimensions are the same as the set configuration item diagram.

- Contact us if you need a different cable length than those listed here.
- Contact us if you need a robot cable.
- Special crimping and pressure welding tools are required to assemble the harness. Refer to the manufacturer of the individual connectors for details.
- Refer to p. 48 to 49 for compatible wires, model number details, and connector pin arrangements.

Connector unit for setup software Model number: PBFM-U6

Name	Manufacturer model number	Quantity
USB/RS-485 converter	Uport 1130 (manufactured by MOXA)	1
Cable	PBC6T0005A (0.5m)	1

Refer to the included installation manual (CD-ROM) or the manufacturer's website for instructions on installing the Uport 1130 driver or details on its use.

Setup software (free)

Name	SANMOTION MOTOR SETUP SOFTWARE
Compatible operating systems	Windows XP (SP3 or higher)/Vista/7/8

The software can be downloaded from the Product Information page on our website.URL: http://www.sanyodenki.com

Downloaded from Arrow.com.

The electromagnetic brake only works when the motor is stopped, and cannot be used for braking.
Data is measured under the trial conditions of SANYO DENKI. Driving torque may vary according to actual machine precision.

If allowable instantaneous torque is exceeded when using a motor with harmonic gears, the gears may be damaged. When selecting a motor, ensure that its allowable instantaneous torque will not be exceeded.
Data is measured under the trial conditions of SANYO DENKI. Driving torque may vary according to actual machine precision.

Stepping Motor: General Specifications

Motor model number	SM542□	SM560□	SM586□
Type	S1 (continuous operation)		
Operating ambient temperature	−10˚C to +40˚C (0 to +40˚C for harmonic gear model)		
Storage temperature	−20˚C to +60˚C		
Operating ambient humidity	95% RH max.: Under 40˚C (no condensation)		
Storage humidity	95% RH max.: Under 40˚C, 57% RH max.: Under 50˚C, 35% RH max.: Under 60˚C (no condensation)		
Operation altitude	1000 m or less above sea level		
Vibration resistance	Vibration frequency 10 to 500 Hz, total amplitude 1.52 mm (10 to 70 Hz), vibration acceleration 150 m/s² (70 to 500 Hz), sweep time 15 min/cycle, 12 sweeps in each X, Y and Z direction.		
Impact resistance	500 m/s² of acceleration for 11 ms with half-sine wave applying three times for X, Y and Z axes each, 18 times in total.		
Thermal class	F (+155˚C)		
Withstandable voltage	At normal temperature and humidity, no failure with 1500 VAC @50/60 Hz applied for one minute between motor winding and frame.		
Insulation resistance	At normal temperature and humidity, not less than 100 MΩ between motor winding and frame by 500 VDC megger.		
Protection grade	IP40		
Winding temperature rise	85 K max. (Based on SANYO DENKI standard)		
Static angle error	±0.09˚		
Thrust play *1	0.075 mm max. (load: 5 N)	0.075 mm max. (load: 10 N)	0.075 mm max. (load: 10 N)
Radial play *2	0.025 mm max. (load: 5 N)	0.025 mm max. (load: 5 N)	0.025 mm max. (load: 5 N)
Shaft runout	0.025 mm	0.025 mm	0.025 mm
Concentricity of mounting pilot relative to shaft	ϕ0.05 mm	ϕ0.075 mm	ϕ0.075 mm
Squareness of mounting surface relative to shaft	0.1 mm	0.1 mm	0.15 mm
Direction of motor mounting	Can be freely mounted vertically or horizontally		

*1 Thrust play: Shaft displacement under axial load.
*2 Radial play: Shaft displacement under radial load applied 1/3rd of the length from the end of the shaft.

Safety standards

CE marking	Directives	Applicable standard
	Low-voltage directives (2014/35/EU)	EN60034-1, EN60034-5

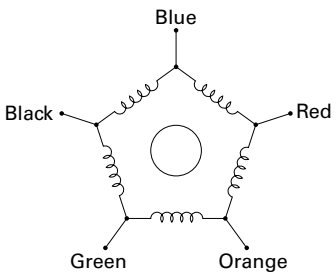
UL	Acquired standards	Applicable standard	File No.
	UL	UL1004-1, UL1004-6	E179832 (PRHZ2)
	cUL *3	CSA C22.2 No.100	E179832 (PRHZ8)

*3 SM542□ type is not cUL compliant.

Internal Wiring and Rotation Direction

Internal wire connection

Connection Method:
New pentagon connection



Direction of motor rotation

When excited by a direct current in the order shown below, the direction of rotation is clockwise as viewed from the output shaft side.

*This is an instance of the standard model and the electromagnetic brake model.
As for some of the models with the gear, the direction of motor rotation is different, please make inquiries.

		Exciting order									
		1	2	3	4	5	6	7	8	9	10
Lead wire color	Blue			+	+	+			−	−	−
	Red	−	−			+	+	+			−
	Orange		−	−	−			+	+	+	
	Green	+			−	−	−			+	+
	Black	+	+	+			−	−	−

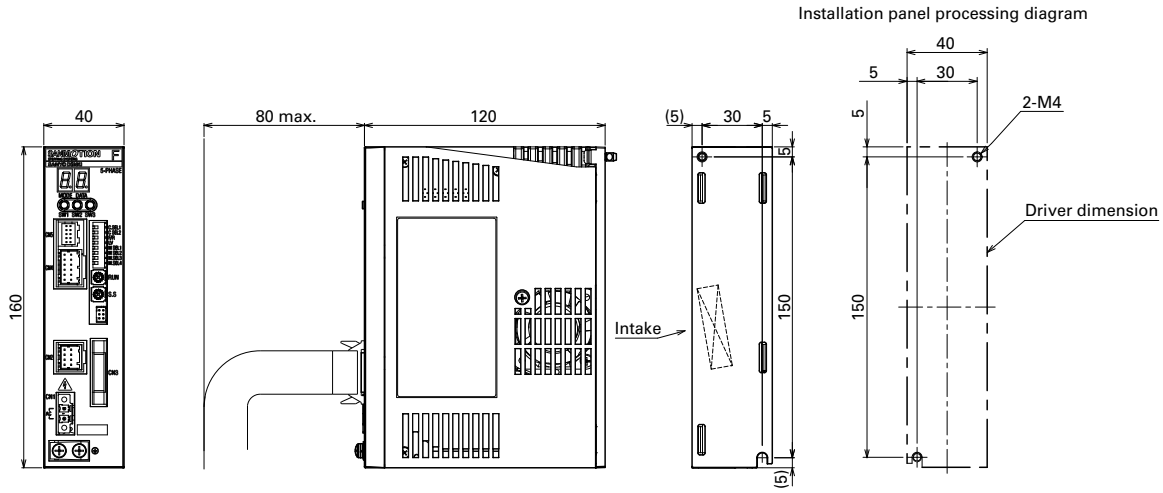
Driver Dimensions (Unit: mm)



Driver Specifications

General specifications

Basic specifications	Model number		**F5PAA035P100**	**F5PAA075P100**	**F5PAB035P100**	**F5PAB075P100**
	Input source		Single Phase 100 to 120 VAC +10, −15%, 50/60 Hz		Single Phase 200 to 240 VAC +10, −15%, 50/60 Hz	
	Source current		2A	4A	1.5A	3A
	Environment	Protection class	Class Ⅰ			
		Operation environment	Installation category (over-voltage category): Ⅱ, pollution degree: 2			
		Operating ambient temperature	0 to +55˚C			
		Storage temperature	−20 to +70˚C			
		Operating ambient humidity	90% RH max. (no condensation)			
		Storage humidity	90% RH max. (no condensation)			
		Operation altitude	1000 m or less above sea level			
		Vibration resistance	Tested under the following conditions: 5 m/s² frequency range 10 to 55 Hz, direction along X, Y and Z axes, for 2 hours each			
		Impact resistance	20 m/s²			
		Withstandable voltage	Not influenced when 1.5 kVAC is applied between power input terminal and cabinet for one minute.			
		Insulation resistance	10 MΩ min. when measured with 500 VDC megohmmeter between input terminal and cabinet.			
	Mass		0.65 kg			
Functions	Selection functions		Control mode, pulse input type, low-vibration mode, motor select, step angle, operating current			
	Protection functions		Overvoltage protection, power supply voltage reduction protection, overheat protection, overcurrent protection			
	LED indication		Status display, alarm display			
I/O signals	Command pulse input signal	Open collector terminal	Photocoupler input system; input resistance: 470 Ω Input-signal "H" level: 4.5 to 5.5 V, input-signal "L" level: 0 to 0.5 V Maximum input frequency: 400 kpulse/s			
		Line driver terminal	Photocoupler input system; input resistance: 150 Ω Input-signal "H" level: 3.0 to 3.5 V, input-signal "L" level: 0 to 0.5 V Maximum input frequency: 400 kpulse/s			
	Input signal		Photocoupler input system; input resistance: 2.2 kΩ Input-signal "H" level: 4.75 to 26.4 V, input-signal "L" level: 0 to 1.0 V			
	Output signal		From the photocoupler by the open collector output Output specification: Vceo = 4.75 to 26.4 V, Ic = 10 mA max.			

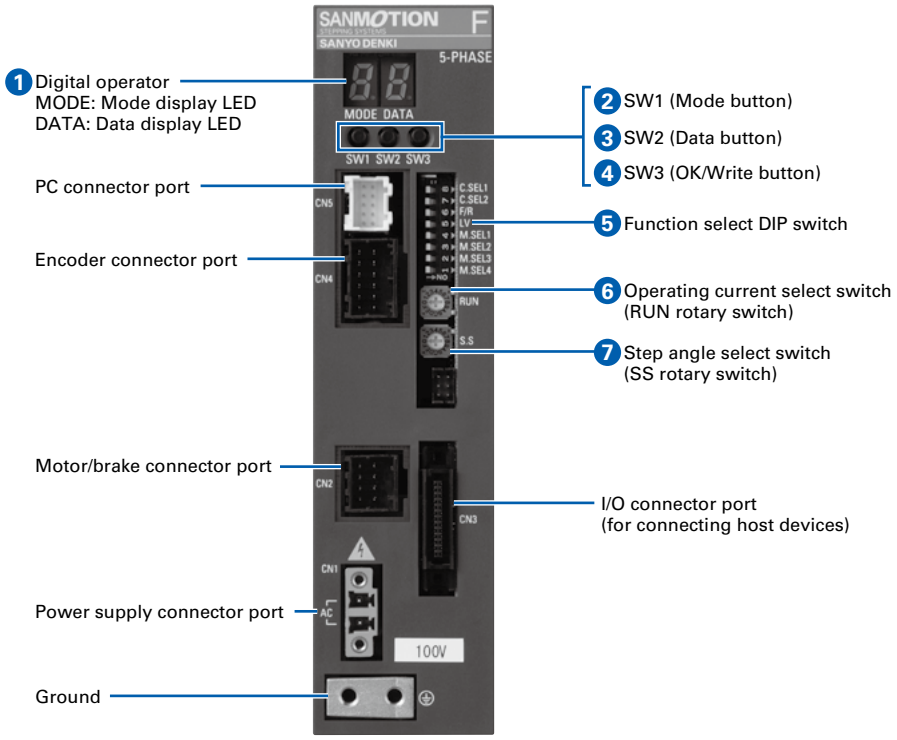
Safety standards

CE (TÜV)	Directives	Standard	Name
	Low-voltage directives	EN61800-5-1	—
	EMC directives	EN61800-3 EN61000-6-2 EN61000-6-4	—
UL	Acquired standards	Applicable standard	File No.
	UL	UL508C	E179775
	UL for Canada (c-UL)		
KC Mark (Korea Certification Mark)	Standard		
	KN61000-6-2, KN61000-6-4		

- EMC characteristics may vary depending on the configuration of the users' control panel, which contains the driver or stepping motor, or the arrangement and wiring of other electrical devices.
  Parts for EMC noise suppression like noise filters and toroidal type ferrite cores may be required depending on circumstances.
- Validation test of driver has been performed for low-voltage EMC directives at TÜV (TÜV product service) for self-declaration of CE marking.

Downloaded from Arrow.com.

Driver Controls and Connectors



1 Digital operator

Allows specific parameters to be set, and for jog operations.

- MODE (Mode display LED)

Displays the current mode number.

MODE	Functions	Data range (DATA display)	Factory setting
0	Driver status display	Displays the driver status	—
4	Current settings when stopped	0-F (100%-25%)	A (50%)
5	Step division mode settings	2=2-phase; 5=5-phase	5 (5-phase)
6	Step division 2 settings	0-F (same as SS rotary switch)	0 (1 division)
7	Excitation select	0= Excitation origin, 1= Power shutdown excitation phase	0 (excitation origin)
8	Jog operation speed	1-F (100 min^{-1}/LSB)	1 (100 min^{-1})
9	Jog operation	—	—
A	Alarm code display	Displays the alarm code	—
B	Settings control	0= Settings control disabled, 1 to F (small effect to large effect)	0 (disabled)

- DATA (data display LED)

Displays monitor and parameter setting values. Blinks when the displayed parameter setting value is different from the current setting value.

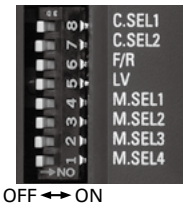
2 SW1 (Mode button)
3 SW2 (Data button)
4 SW3 (OK/Write button)

Used for each setting in conjunction with the digital operator. See the operation manual for details on the settings. Download the necessary manual from the Product Information page on our website.

5 Function select DIP switch

Sets the control mode, input pulse type, low-vibration mode, and motor select.

SW No.	Symbol	Functions
8	C.SEL1	Control mode select
7	C.SEL2	
6	F/R	Input pulse type select
5	LV	Low-vibration mode select
4	M.SEL1	Motor select
3	M.SEL2	
2	M.SEL3	
1	M.SEL4	



OFF ◄► ON

- Set the DIP switches while the power supply is shut off. These settings cannot be changed after the power has been turned on.
- Factory settings are LV set to ON and all others set to OFF.

6 Operating current select switch (RUN rotary switch)

Sets the operating current.

Dial	0	1	2	3	4	5	6	7
Stepping motor current (%)	100	95	90	85	80	75	70	65
Dial	8	9	A	B	C	D	E	F
Stepping motor current (%)	60	55	50	45	40	35	30	25

- The factory setting is F (25%).

7 Step angle select switch (SS rotary switch)

Sets the step division 1 settings.

5-phase mode Digital operator MODE5 is set to 5.				2-phase mode Digital operator MODE5 is set to 2.			
SS settings	Number of divisions	Resolution	Basic step angle	SS settings	Number of divisions	Resolution	Basic step angle
0	1	500	0.72°	0	0.4	200	1.8°
1	2	1000	0.36°	1	0.8	400	0.9°
2	2.5	1250	0.288°	2	1.6	800	0.45°
3	4	2000	0.18°	3	2	1000	0.36°
4	5	2500	0.144°	4	3.2	1600	0.225°
5	8	4000	0.09°	5	4	2000	0.18°
6	10	5000	0.072°	6	6.4	3200	0.1125°
7	20	10000	0.036°	7	10	5000	0.072°
8	25	12500	0.0288°	8	12.8	6400	0.05625°
9	40	20000	0.018°	9	20	10000	0.036°
A	50	25000	0.0144°	A	25.6	12800	0.028125°
B	80	40000	0.009°	B	40	20000	0.018°
C	100	50000	0.0072°	C	50	25000	0.0144°
D	125	62500	0.00576°	D	51.2	25600	0.0140625°
E	200	100000	0.0036°	E	100	50000	0.0072°
F	250	125000	0.00288°	F	102.4	51200	0.00703125°

- The factory setting is 1.
- Step division 1 and step division 2 can be used while switching with the I/O signal.
- Step division setting 2 can be set in the Mode 6 of the digital operator.

Downloaded from Arrow.com.

Control mode select

Select the stepping motor control mode.

SW8	SW7	Control mode
C.SEL1	C.SEL2	
OFF	OFF	Normal mode
ON	OFF	Analysis mode
OFF	ON	Reserved (do not set)
ON	ON	Reserved (do not set)

- Normal mode
  Controls general stepping motor operations.
- Analysis mode
  Encoder models can detect step-out, monitor speed, monitor the current position, etc.

Input pulse type select

Select the input pulse type.

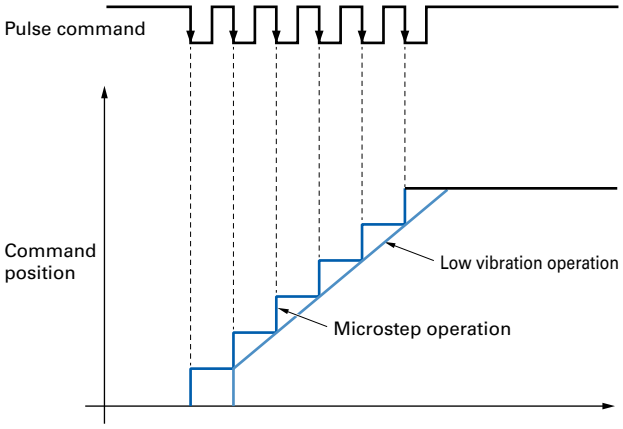
SW6	Input pulse type
F/R	
OFF	2-input type (CW pulse/CCW pulse)
ON	1-input type (Pulse/Direction)

Low-vibration mode select

Allows for smooth operation with low vibrations, even with step division set at coarse resolution.

SW5	Operation
LV	
OFF	Microstep operation
ON	Low vibration operation

During low vibration operation, operational processes for the driving pulse will be carried out inside the driver. For this reason, motor movement will be delayed by 1 pulse for each input pulse.



Motor select

Select a motor to be used with the driver.

Driver model number: F5PAA035P100, F5PAB035P100

Wiring

Wiring

Power supply connector (CN1)

Pin No.	Symbol	Signal name
1	AC	AC
2	AC	AC

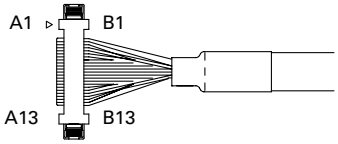
- Do not wire the motor power line, I/O cable, or encoder cable together with the power cable inside the same duct.
- Make sure to wait for at least 10 minutes after shutting down the power, before plugging or unplugging the power cable. Failure to do so may cause damage to the driver.
- Select the appropriate breaker, electromagnetic contactor, and noise filter after referring to the details in the Operation Manual on power supply current, inrush current, and leakage current.

Power connector (CN2)

Pin No.	Signal name	Lead wire color
A1	Power A phase	Blue
B1	Power B phase	Red
A2	—	—
B2	Power C phase	Orange
A3	Hold brake +	Brown
B3	Power D phase	Green
A4	Hold brake –	White
B4	Power E phase	Black

- The color of the lead wires on the hold brake vary with the polarity. Hold brakes without polarity use the same lead wire color.
- The power supply for the hold brake is inside of the driver. The hold brake is automatically controlled by the driver.
- Make sure to wait for at least 10 minutes after shutting down the power before plugging or unplugging the power lines. Failure to do so may cause damage to the driver.

I/O signal connector (CN3)



Pin No.	Signal name	Functions	Lead wire color	Mark display	Mark color
A1	CW Pulse/ Pulse	CW pulse/pulse (for open collector)	Orange		Red

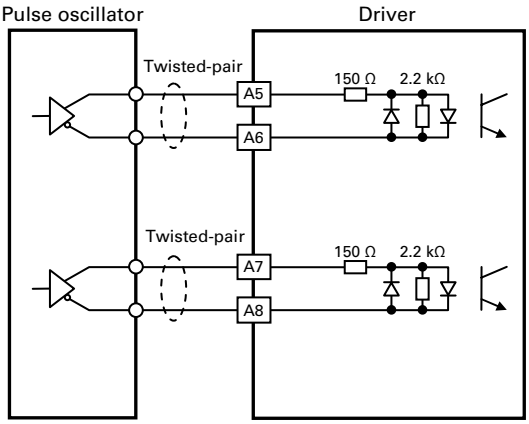
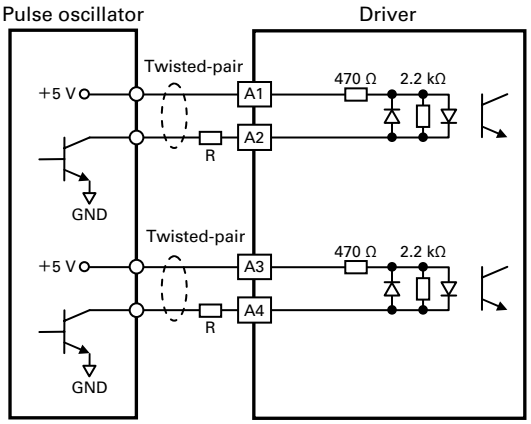
Pulse Command Input

Connection example

Connection to line driver output	Connect to open collector output
Pulse crest value "H" level: 3.0 to 3.5 V "L" level: 0 to 0.5 V	Pulse crest value "H" level: 4.5 to 5.5 V "L" level: 0 to 0.5 V

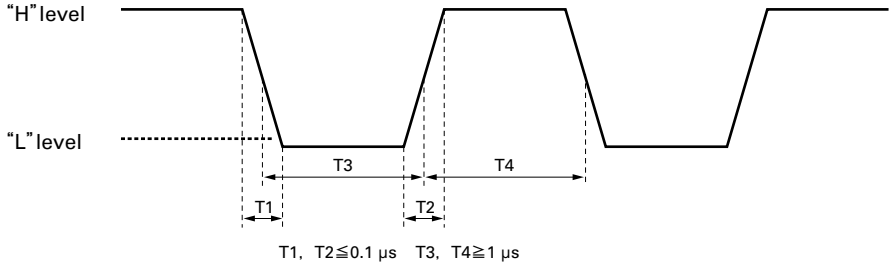




If the peak voltage of the input signal exceeds 5.5 V, please add an external current-limiting resistor R to limit the input current to around 7 mA. (Take the photocoupler forward voltage of 1.5 V into consideration.)

Pulse waveform

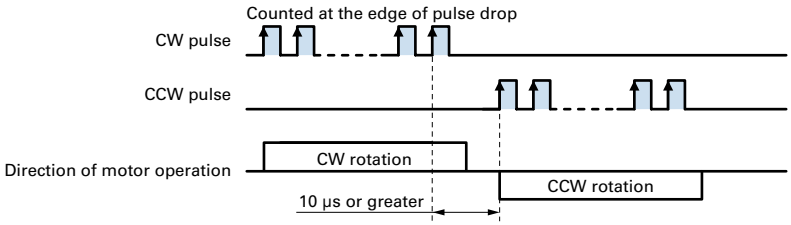
Maximum response frequency: 400 kpulse/s



- Note that the unit cannot be operated at maximum speed if the step division is high due to maximum response frequency limits.

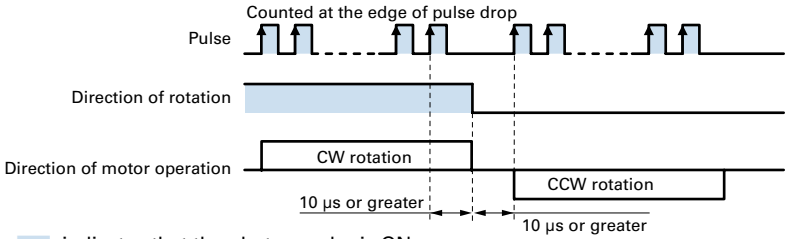
Timing chart

◆2-input type



- indicates that the photocoupler is ON.
- CW rotation means rotation in a clockwise direction when viewed from the motor flange side; and CCW rotation means rotation in a counterclockwise direction when viewed from the motor flange side.
- Do not input CW/CCW pulses at the same time.
- The CW/CCW pulse switching time of "10 μs or greater" is the operating time for the driver internal circuit, not the motor response time. Set a time in which the motor can respond for actual operations.
- 1-input type and 2-input type can be switched by setting the DIP switch: F/R.

◆1-input type (leading edge operation)



- indicates that the photocoupler is ON.
- CW rotation means rotation in a clockwise direction when viewed from the motor flange side; and CCW rotation means rotation in a counterclockwise direction when viewed from the motor flange side.
- The rotating direction switching time of "10 μs or greater" is the operating time for the driver internal circuit, not the motor response time. Set a time in which the motor can respond for actual operations.
- 1-input type and 2-input type can be switched by setting the DIP switch: F/R.

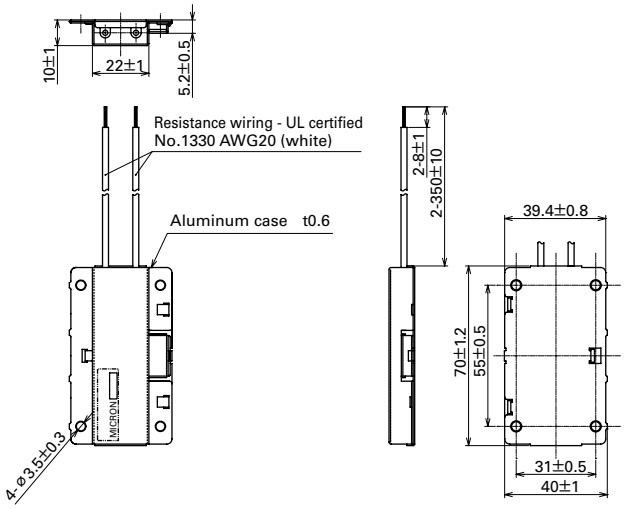
● Regeneration resistor

Use when main supply voltage could exceed 60 VDC.



Model number	FFE-01
Rated power	60 W (with installed in aluminum heatsink 210 x 120 x t2)
Nominal resistance (Nominal standard resistance value)	20 Ω
Resistance value allowable tolerance	±5%
Insulation resistance	100 MΩ or over at 500 VDC megohm (between conductive part of cord and aluminum case)
Withstandable voltage	2000 VAC, for 1 minute (between conductive part of cord and aluminum case)
Instantaneous load tolerance	580 J [The amount of energy that resistor can consume for 1 minute (only once).]
Accessories	Connector model number: FK-MC0,5/2-ST2,5 (PHONENIX CONTACT GmbH & Co. KG) *For connecting the driver. Connect with screws.

If allowable torque is exceeded when using a motor with low-backlash gears, the gears may be damaged. When selecting a motor, ensure that its allowable torque will not be exceeded.

Data is measured under the trial conditions of SANYO DENKI. Driving torque may vary according to actual machine precision.

Stepping Motor: General Specifications

Common to microstep and full/half step.

Motor model number	SH528□	SF542□	SM560□	SM586□
Type	—		S1 (continuous operation)	
Operating ambient temperature	−10˚C to +50˚C (0 to +40˚C for harmonic gear model)		−10˚C to +40˚C (0 to +40˚C for harmonic gear model)	
Storage temperature	−20˚C to +65˚C		−20˚C to +60˚C	
Operating ambient humidity	20 to 90% RH (no condensation)		95% RH max.: Under 40˚C (no condensation)	
Storage humidity	5 to 95% RH (no condensation)		95% RH max.: Under 40˚C, 57% RH max.: Under 50˚C, 35% RH max.: Under 60˚C (no condensation)	
Operation altitude	1000 m or less above sea level			
Vibration resistance	Vibration frequency 10 to 500 Hz, total amplitude 1.52 mm (10 to 70 Hz), vibration acceleration 150 m/s² (70 to 500 Hz), sweep time 15 min/cycle, 12 sweeps in each X, Y and Z direction.			
Impact resistance	500 m/s² of acceleration for 11 ms with half-sine wave applying three times for X, Y and Z axes each, 18 times in total.			
Thermal class	B (+130˚C)		F (+155˚C)	
Withstandable voltage	At normal temperature and humidity, no failure with 500 VAC @50/60 Hz applied for one minute between motor winding and frame.	At normal temperature and humidity, no failure with 1500 VAC @50/60 Hz applied for one minute between motor winding and frame.		
Insulation resistance	At normal temperature and humidity, not less than 100 MΩ between winding and frame by 500 VDC megger.			
Protection grade	IP40			
Winding temperature rise	80 K max. (Based on SANYO DENKI standard)		85 K max. (Based on SANYO DENKI standard)	
Static angle error	±0.09˚			
Thrust play *1	0.075 mm max. (load: 1.5 N)	0.075 mm max. (load: 5 N)	0.075 mm max. (load: 10 N)	0.075 mm max. (load: 10 N)
Radial play *2	0.025 mm max. (load: 5 N)	0.025 mm max. (load: 5 N)	0.025 mm max. (load: 5 N)	0.025 mm max. (load: 5 N)
Shaft runout	0.025 mm	0.025 mm	0.025 mm	0.025 mm
Concentricity of mounting pilot relative to shaft	ϕ0.05 mm	ϕ0.05 mm	ϕ0.075 mm	ϕ0.075 mm
Squareness of mounting surface relative to shaft	0.1 mm	0.1 mm	0.1 mm	0.15 mm
Direction of motor mounting	Can be freely mounted vertically or horizontally			

*1 Thrust play: Shaft displacement under axial load.

*2 Radial play: Shaft displacement under radial load applied 1/3rd of the length from the end of the shaft.

Safety standards

Model number: SM560□ SM586□

CE marking	Directives	Applicable standard

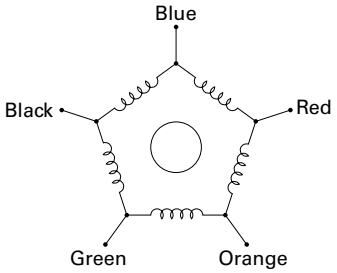
UL	Acquired standards	Applicable standard	File No.
	UL	UL1004-1, UL1004-6	E179832 (PRHZ2)
	c-UL	CSA C22.2 No.100	E179832 (PRHZ8)

Internal Wiring and Rotation Direction

Common to microstep and full/half step.

Internal wire connection

Connection Method:
New pentagon connection



Direction of motor rotation

When excited by a direct current in the order shown below, the direction of rotation is clockwise as viewed from the output shaft side.

*This is an instance of the standard model and the electromagnetic brake model.
As for some of the models with the gear, the direction of motor rotation is different, please make inquiries.

		Exciting order									
		1	2	3	4	5	6	7	8	9	10

Driver Specifications

General specifications

Basic specifications	Model number		**F5PAE140P100**
	Main circuit power		24 VDC/48 VDC ± 10%*1
	Main circuit power supply current		3 A
	Environment	Protection class	Class Ⅲ
		Operation environment	Installation category (over-voltage category): Ⅰ (CE)　Pollution level: 2
		Operating ambient temperature	0 to +50˚C
		Storage temperature	−20 to +70˚C
		Operating ambient humidity	35 to 85% RH (no condensation)
		Storage humidity	10 to 90% RH (no condensation)
		Operation altitude	1000 m or less above sea level
		Vibration resistance	Tested under the following conditions; 5 m/s², frequency range 10 to 55 Hz, direction along X, Y and Z axes, for 2 hours each
		Impact resistance	20 m/s²
		Withstandable voltage	Not influenced when 0.5 kVAC is applied between power input terminal and cabinet for one minute.
		Insulation resistance	10 MΩ min. when measured with 500 VDC megohmmeter between input terminal and cabinet.
	Mass		0.23 kg
Functions	Selection function		Pulse input type (1-input type/2-input type), low-vibration mode (low-vibration drive/ microstep drive), resolution (2-phase mode/5-phase mode), output signal (phase origin monitor/alarm), operating current, step-angle
	Protection functions		Overcurrent protection
	LED indication		Power supply monitor, alarm display (main power supply under- and overvoltage, regenerative fault, overcurrent fault, hardware fault)
I/O signals	Auto-Current-Down canceling input signal		Photocoupler input system; input resistance: 330 Ω Input-signal "H" level: 4.5 to 5.5 V; input-signal "L" level: 0 to 0.5 V
	Step-angle selection input		Photocoupler input system; input resistance: 330 Ω Input-signal "H" level: 4.5 to 5.5 V; input-signal "L" level: 0 to 0.5 V
	Command pulse input signal		Photocoupler input system; input resistance: 330 Ω Input-signal "H" level: 4.5 to 5.5 V; input-signal "L" level: 0 to 0.5 V Provided that voltage between Level H to L shall be 4.5 V or over. Maximum input frequency: 400 kpulse/s
	Power down input signal		Photocoupler input system; input resistance: 330 Ω Input-signal "H" level: 4.5 to 5.5 V; input-signal "L" level: 0 to 0.5 V
	Phase origin monitor output signal/ Alarm output signal		Open collector output via photocoupler Output signal standard　Vceo: 30 V or less *2 Ic: 5 mA or less Vce (sat): 1.0 V or less

*1 Use either 24 VDC±10% or 48 VDC±10% for main circuit power supply. Make sure never exceed 60 VDC, even if power supply voltage increases due to counter-electromotive force after misstep occurs. If there are any possibilities of exceeding 60 VDC, connect optional regenerative resistor. Regenerative resistor use is recommended if you operate with 60 mm sq. or 86 mm sq. motor.

*2 Make sure the voltage used for output signal is 5 VDC or over.

Safety standards

	Directives	Category	Standard	Name
CE (TÜV)	Low-voltage directives	—	EN61800-5-1	—
	EMC directives	Emission	EN61000-6-4	Conducted emissions test

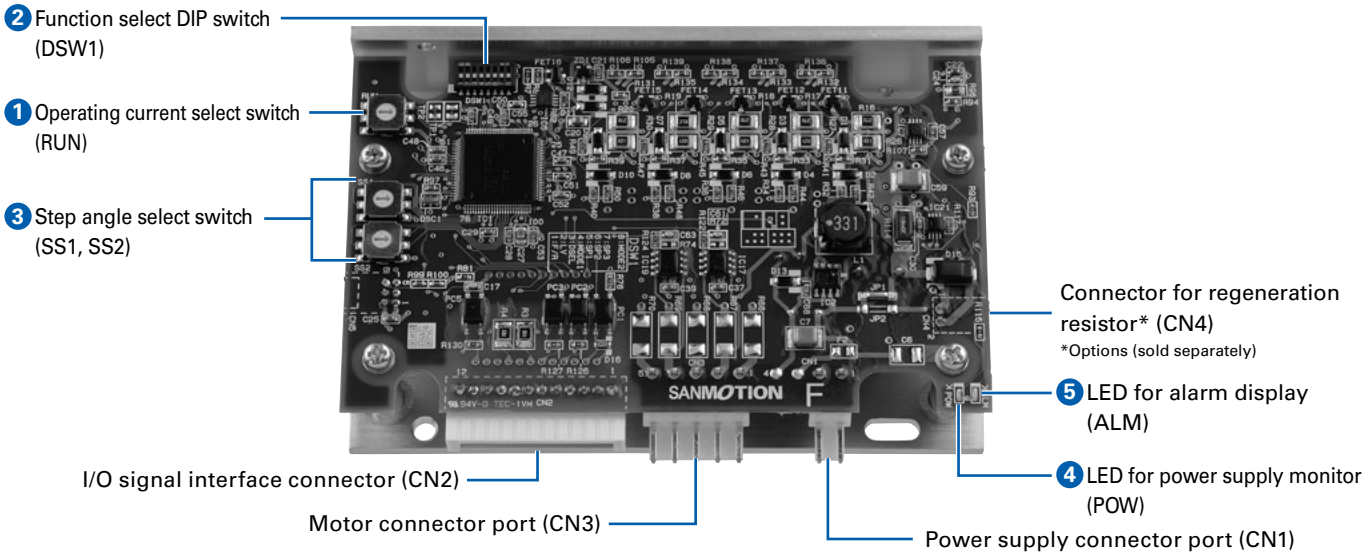
		Immunity	EN61000-4-2	ESD (Electrostatic discharge)
			EN61000-4-3	RS (Radio-frequency amplitude modulated electromagnetic field)
			EN61000-4-4	Fast transionts
			EN61000-4-5	CS (Radio-frequency common mode)
			EN61000-4-6	Surges
UL	Acquired standards		Applicable standard	File No.
	UL		UL508C	E179775
	UL for Canada (c-UL)			

- EMC characteristics may vary depending on the configuration of the users' control panel, which contains the driver or stepping motor, or the arrangement and wiring of other electrical devices.
  Parts for EMC noise suppression like noise filters and toroidal type ferrite cores may be required depending on circumstances.
- Validation test of driver has been performed for low-voltage EMC directives at TÜV (TÜV product service) for self-declaration of CE marking.

Downloaded from Arrow.com.

Driver Controls and Connectors



1 Operating current select switch (RUN)

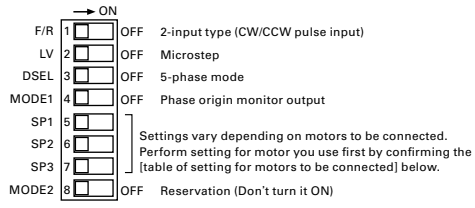
Operating motor current value can be set with the rotary switch.

Dial	0	1	2	3	4	5	6	7
Stepping motor current (A)	1.4	1.35	1.3	1.25	1.2	1.15	1.1	1.05
Dial	8	9	A	B	C	D	E	F
Stepping motor current (A)	1.0	0.95	0.9	0.85	0.8	0.75	0.7	0.65

- The factory default value is F (0.65 A).
  Please check the rated current of the motor to be combined before selecting the operation current.
- If there are sufficient margin of motor torque, decreasing operating current value becomes effective for vibration reduction. Motor output torque is approximately proportional to current.
- Make sure to confirm there are sufficient operation margin before determining motor current value to adjust operating current.

2 Function select DIP switch (DSW1)

Select the function depending on your specification.
Factory default settings



- Perform setting for motor to be connected first.
- Make sure to turn off power supply of the driver when changing setting s of function select DIP switch.

[Table of setting for motors to be connected]

SP1	SP2	SP3	Motor to be connected
OFF	OFF	OFF	SH5281-72□□, SH5285-72□□, SF5421-82□□
OFF	OFF	ON	SF5422-82□□
OFF	ON	OFF	SF5423-82□□
OFF	ON	ON	SM5601-82□□
ON	OFF	OFF	SM5602-82□□
ON	OFF	ON	SM5603-82□□, SM5861-82□□
ON	ON	OFF	SM5862-82□□

1. Pulse input type selection (F/R)

Select the input pulse type.

F/R	Pulse input type
ON	1-input type (CK, U/D)
OFF	2-input type (CW, CCW)

2. Low-vibration mode select (LV)

Provides low-vibration, smooth operation even if resolution is rough (1-division, 2-division, etc)

LV	Operation
ON	Low-vibration drive
OFF	Microstep

3. Resolution selection (DSEL)

Select the step angle select switch (SS1, SS2) mode.

DSEL	Resolution mode
ON	2-phase mode: Operation as normal 2-phase stepping system at 1.8˚ to 0.00703125˚ -step angle is available.
OFF	5-phase mode: Operation as normal 5-phase stepping system at 0.72˚ to 0.00288˚ -step angle is available.

4. Output signal selection (MODE1)

Select the output signal

MODE1	Output signal
ON	Alarm output
OFF	Phase origin monitor output

5 to 7. Motor selection (SP1, SP2, SP3)

Perform setting for motor you use first by confirming the [table of setting for motors to be connected].

8. (MODE2)

Do not turn ON this switch.

3 Step angle select switch (SS1, SS2)

The number of divisions of the stepping motor basic step angle can be set with the rotary switch.

After selecting 2- or 5-phase mode by function select DIP switch 3 (DSEL), set the step angle select switches for the desired step angle.

5-Phase Mode: DSW1 function select DIP switch 3 = OFF				2-Phase Mode: DSW1 function select DIP switch 3 = ON			
SS1, SS2	Number of divisions	Resolution	Basic step angle	SS1, SS2	Number of divisions	Resolution	Basic step angle
0	1	500	0.72˚	0	0.4	200	1.8˚
1	2	1000	0.36˚	1	0.8	400	0.9˚
2	2.5	1250	0.288˚	2	1.6	800	0.45˚
3	4	2000	0.18˚	3	2	1000	0.36˚
4	5	2500	0.144˚	4	3.2	1600	0.225˚
5	8	4000	0.09˚	5	4	2000	0.18˚
6	10	5000	0.072˚	6	6.4	3200	0.1125˚
7	20	10000	0.036˚	7	10	5000	0.072˚
8	25	12500	0.0288˚	8	12.8	6400	0.05625˚
9	40	20000	0.018˚	9	20	10000	0.036˚
A	50	25000	0.0144˚	A	25.6	12800	0.028125˚
B	80	40000	0.009˚	B	40	20000	0.018˚
C	100	50000	0.0072˚	C	50	25000	0.0144˚
D	125	62500	0.00576˚	D	51.2	25600	0.0140625˚
E	200	100000	0.0036˚	E	100	50000	0.0072˚
F	250	125000	0.00288˚	F	102.4	51200	0.00703125˚

- Factory default setting: SS1 = 1 and SS2 = 0
- Set the step angle select input (DSEL) to select SS1 or SS2, then set the rotary switch.

4 LED for power supply monitor (POW)

Lights up when the control power and main circuit power supply are connected.

5 LED for alarm display (ALM)

Flashes repeatedly when an alarm is generated.

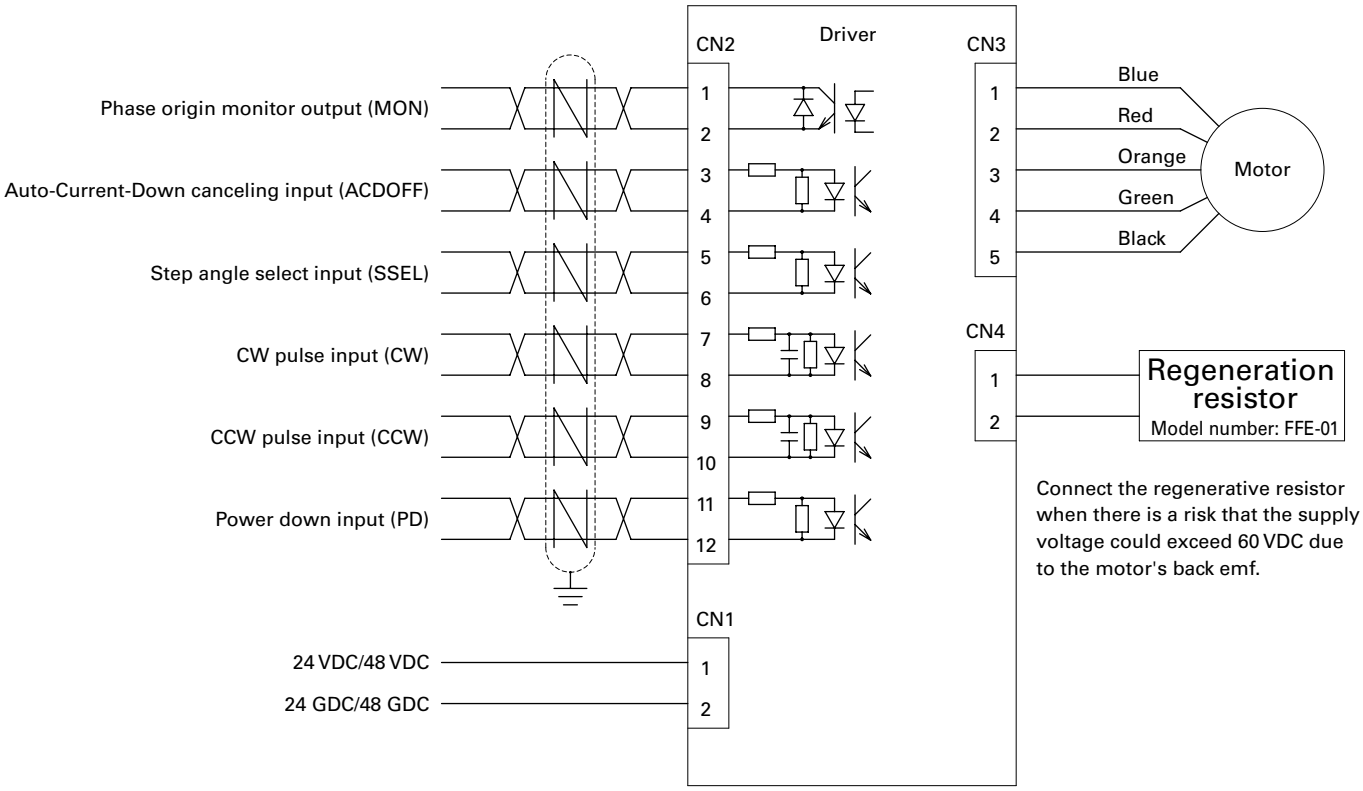
Indication	Explanation
"ALM" repeats single-flashing.	Main power supply voltage drop (Detected when excitation is on.)
"ALM" repeats double-flashing.	Overvoltage of main power supply (Detected when motor stops.)
"ALM" repeats triple-flashing.	Regeneration error (Detected when motor is operating.)
"ALM" repeats quadruple-flashing.	Overcurrent error
"ALM" repeats five-times-flashing.	Hardware error

- When alarm activated, stepping motor winding current is interrupted and then the state becomes "not-excited" at the same time that LED "ALM" flahes.
  When "DSW1: MODE1" is set to ON, signal is output outward from alarm output terminal (AL). (Photocoupler is turned on.)
  This state is maintained until the power supply is turned off. Please re-turn on the power supply after eliminating alarm cause.

Downloaded from Arrow.com.

Connections and Signals

External wiring diagram



Connect the regenerative resistor when there is a risk that the supply voltage could exceed 60 VDC due to the motor's back emf.

Applicable wire sizes

Part	Applicable wire	Insulation diameter	Wiring length
For power supply	AWG20 (0.5 mm^2) to AWG18 (0.75 mm^2)	ϕ1.7 to ϕ3.0 mm	Under 3 m
For input/outputsignal	AWG24 (0.2 mm^2) to AWG22 (0.3 mm^2)	ϕ1.15 to ϕ1.8 mm	Under 3 m
For motor	AWG20 (0.5 mm^2) to AWG18 (0.75 mm^2)	ϕ1.7 to ϕ3.0 mm	10 m max.

When bundling wire together or running wires through duct, take reduction rate of each wire allowable current into consideration. When ambient temperature is relatively high, wire product lifetime is reduced due to heat deterioration. In this case, please use Heat resistant Indoor PVC (HIV).

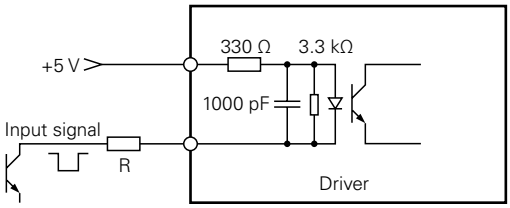
Specification summary of I/O signals

Signal name	CN2 Pin number	Function summary
Phase origin monitor output (standard)	1 2	DSW1 MODE1=OFF Photocoupler is turned on when excitation phase is the origin (the state power supply is turned on).
Alarm output	1 2	DSW1 MODE1=ON Photocoupler is turned on when the driver is in the state of alarm being activated.
Auto-Current-Down canceling input	3 4	Inputting this signal (internal photpcoupler is turned on) disables Auto-Current-Down function.
Step angle select input	5 6	Division numbers can be switched via SSEL-signal. Internal photocoupler is OFF ··· Setting via rotary switch SS1 enabled Internal photocoupler is ON ··· Setting via rotary switch SS2 enabled
CW pulse input (standard)	7 8	When in "2-input type", input the drive pulse that rotates in a CW direction.
Pulse train input	7 8	When in "1-input type", input the drive pulse train for motor rotation.
CCW pulse input (standard)	9 10	When in "2-input type", input the drive pulse that rotates in a CCW direction.
Rotational direction input	9 10	When in "1-input type", input the motor rotational direction signal. Internal photocoupler ON ··· CW direction Internal photocoupler OFF ··· CCW direction
Power down input	11 12	Inputting this signal (internal photocoupler is turned on) shuts off the current carried to motor.

· As for the motor rotational direction, CW direction is regarded as the clockwise rotation, and CCW direction is regarded as the counterclockwise rotation by viewing the motor from output shaft side.

Downloaded from Arrow.com.

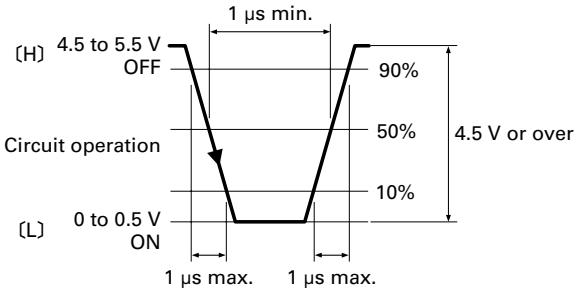
Input Circuit Configuration of CW (CK), CCW (U/D)



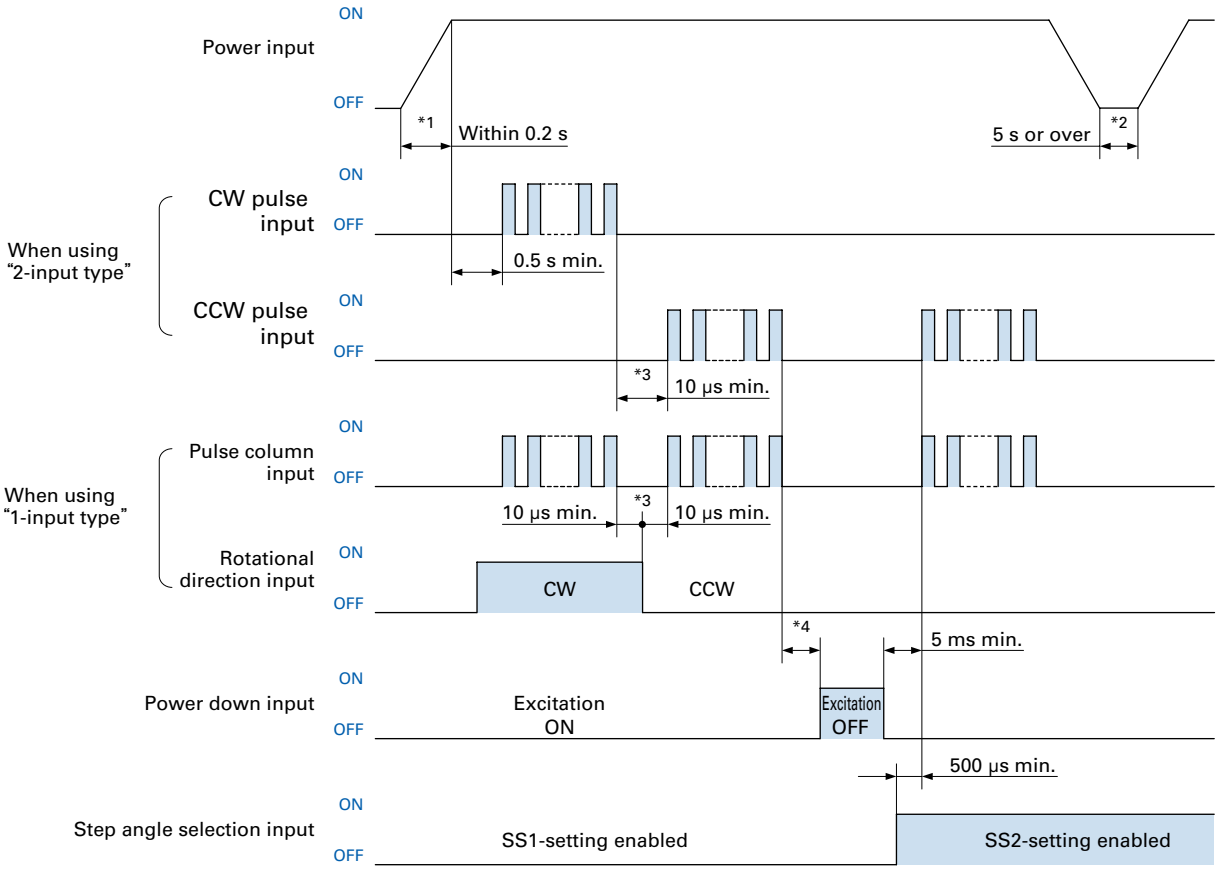
- Pulse duty 50% max.
- Maximum input frequency: 400 kpulse/s
- If the peak voltage of the input signal exceeds 5.5 V, please add an external current-limiting resistor R to limit the input current to around 10 mA. (Take the photocoupler forward voltage of 1.5 V into consideration.)

Input signal specification

〈Photocoupler type〉



Timing of command pulse

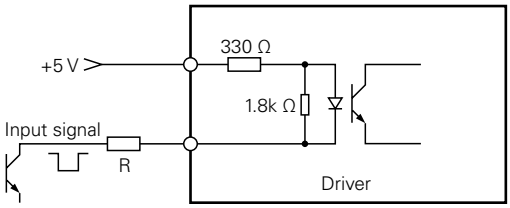


- The frequency of the power ON/OFF of the driver shall be 5 times/hour or less and 30 times/day or less.
- ■ indicates ON of photocoupler emitting side.
- When operating in double-input method, and then inputting pulse into CW, set CCW-side to OFF. When inputting pulse into CCW, set CW-side to OFF.
- For 1-input type, CK should be off when switching U/D input signal.

*1 The time for the power supply to be established shall be within 0.2 seconds.
*2 Re-turning on the power supply shall be at intervals of more than 5 seconds.
*3 "10 µs or more" shown above is response time within driver internal circuit, so set the time such that motor can response.
*4 Input power-down input signal in the state motor has been settled.

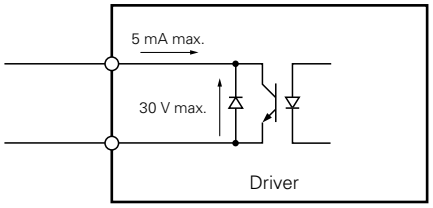
Downloaded from Arrow.com.

Input Circuit Configuration of ACDOFF, SSEL, PD

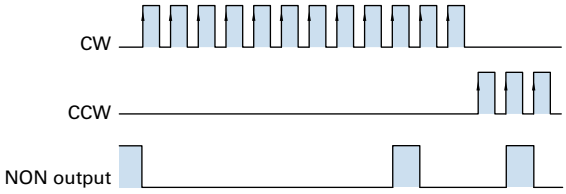


- If the peak voltage of the input signal exceeds 5.5 V, please add an external current-limiting resistor R to limit the input current to around 10 mA. (Take the photocoupler forward voltage of 1.5 V into consideration.)

Output Signal Configuration of MON, AL



MON output



Example: 5-phase mode, 1 division (Full step)

- When the motor excitation phase is at the phase origin (power ON status), the photocoupler is ON.
- Inputting pulse turns on photocoupler every 7.2˚ of motor output axis from phase origin.
- Set command frequency to 50 kpulse/s or less to use phase origin monitor.
- Perform switching of division number via step-angle selection input signal (SSEL) with phase origin monitor output turned on and motor being stopped.
- Switching division number at the point other than excitation origin may cause that phase origin monitor output is not correctly output.

If allowable torque is exceeded when using a motor with low-backlash gears, the gears may be damaged. When selecting a motor, ensure that its allowable torque will not be exceeded.

Data is measured under the trial conditions of SANYO DENKI. Driving torque may vary according to actual machine precision.

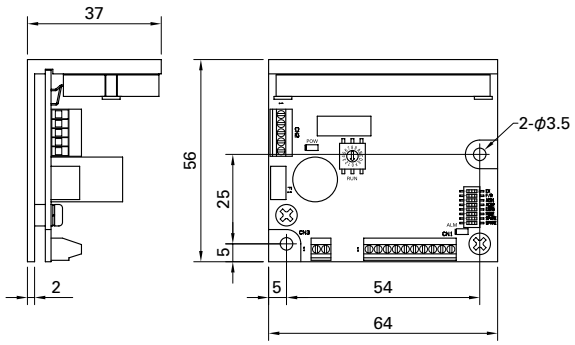
Stepping Motor Dimensions, General Specifications, Internal Wiring, and Rotation Directions

Same as DC set model (microstep). See pages 71–75.

Driver Dimensions (Unit: mm)



Driver Specifications

General specifications

Basic specifications		Model number	**FS1D140P10**
		Power supply	24 VDC/36 VDC±10%
		Source current	3 A
	Environment	Protection class	Class Ⅲ
		Operation environment	Installation category (over-voltage category): Ⅰ (CE) Pollution level: 2
		Operating ambient temperature	0 to +50˚C
		Storage temperature	−20 to +70˚C
		Operating ambient humidity	35 to 85% RH (no condensation)
		Storage humidity	10 to 90% RH (no condensation)
		Operation altitude	1000 m or less above sea level
		Vibration resistance	Tested under the following conditions; 5 m/s², frequency range 10 to 55 Hz, direction along X, Y and Z axes, for 2 hours each
		Impact resistance	Not influenced at NDS-C-0110 standard section 3.2.2 division "C".
		Withstandable voltage	Not influenced when 500 VAC is applied between power input terminal and cabinet for one minute.
		Insulation resistance	10 MΩ min. when measured with 500 VDC megohmmeter between input terminal and cabinet.
		Mass	0.1 kg
Functions		Selection function	Basic step angle, pulse input type, original excitation phase, stopping current, operating current
		Protection functions	Open phase protection, Voltage reduction in the main circuit power
		LED indication	Power supply monitor, Alarm display (motor cable fault, switching element fault, main circuit voltage out of specified range)
I/O signals		Command pulse input signal	Photocoupler input system; input resistance: 220 Ω Input-signal "H" level: 4.0 to 5.5 V; input-signal "L" level: 0 to 0.5 V MAX. input frequency: 35 kpulse/s
		Power down input signal	Photocoupler input system; input resistance: 220 Ω Input-signal "H" level: 4.0 to 5.5 V; input-signal "L" level: 0 to 0.5 V
		Phase origin monitor output signal	Open collector output by Photocoupler, output signal standard, Vceo = 40 V max., Ic = 10 mA max.
		Alarm output signal	Open collector output by Photocoupler, output signal standard, Vceo = 40 V max., Ic = 10 mA max.

Safety standards

	Directives	Category	Standard	Name
CE (TÜV)	Low-voltage directives	—	EN61010-1	—
	EMC directives	Emission	EN55011-A	Terminal disturbance voltage
			EN55011-A	Electromagnetic radiation disturbance
		Immunity	EN61000-4-2	ESD (Electrostatic discharge)
			EN61000-4-3	RS (Radio-frequency amplitude modulated electromagnetic field)
			EN61000-4-4	Fast transionts
			EN61000-4-6	Surges
UL	Acquired standards		Applicable standard	File No.
	UL		UL508C	E179775
	UL for Canada (c-UL)			

- EMC characteristics may vary depending on the configuration of the users' control panel, which contains the driver or stepping motor, or the arrangement and wiring of other electrical devices. Parts for EMC noise suppression like noise filters and toroidal type ferrite cores may be required depending on circumstances.
- Validation test of driver has been performed for low-voltage EMC directives at TÜV (TÜV product service) for self-declaration of CE marking.

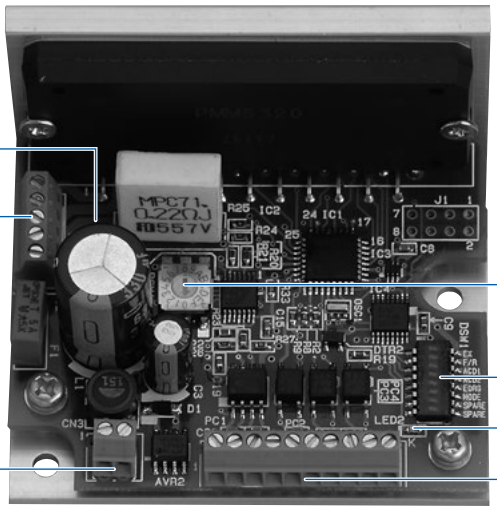
Driver Controls and Connectors



1 Operating current select switch (RUN)

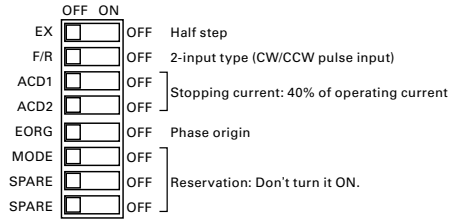
Motor operation current value can be set with the rotary switch.

Indication	0	1	2	3	4	5	6	7
Stepping motor current (A)	1.4	1.35	1.3	1.25	1.2	1.15	1.1	1.05
Indication	8	9	A	B	C	D	E	F
Stepping motor current (A)	1.0	0.95	0.9	0.85	0.8	0.75	0.7	0.65

The factory default value is F (0.65A). Select the current after checking the rated current of the combination motor.

2 Function select DIP switch

Select the function depending on your specification.
Factory default settings



Step angle selection (EX)

Select the basic step angle.

EX	Exciting mode
ON	Full step (0.72°/pulse)
OFF	Half step (0.36°/pulse)

Input type selection (F/R)

Select the input pulse type.

F/R	Input pulse type
ON	1-input type (CK, U/D)
OFF	2-input type (CW, CCW)

Current select when stopping (ACD1, ACD2)

Select the current value of the motor when stopping.

ACD2	ACD1	Motor current
ON	ON	100% of operating current
ON	OFF	60% of operating current
OFF	ON	50% of operating current
OFF	OFF	40% of operating current

Initial configuration of factory shipment is set to 40% of rated value.
Driver and motor should be operated at around 50% of rated value to reduce heat.

Excitation selection (EORG)

The excitation phasse when the power supply is engaged is selected.

EORG	Original excitation phase
ON	Excitation phase at power shut off
OFF	Phase origin

By turning on the EORG, the excitation phase during power OFF will be saved.
Therefore, there will be no shaft displacement when turning the power ON.

3 LED for power supply monitor (POW)

Lights up when main circuit power supply is switched on.

Indication	Indication Explanation
"POW" is displayed.	Main circuit power supply is switched on.

4 LED for alarm display (ALM)

Lights up during alarm conditions.

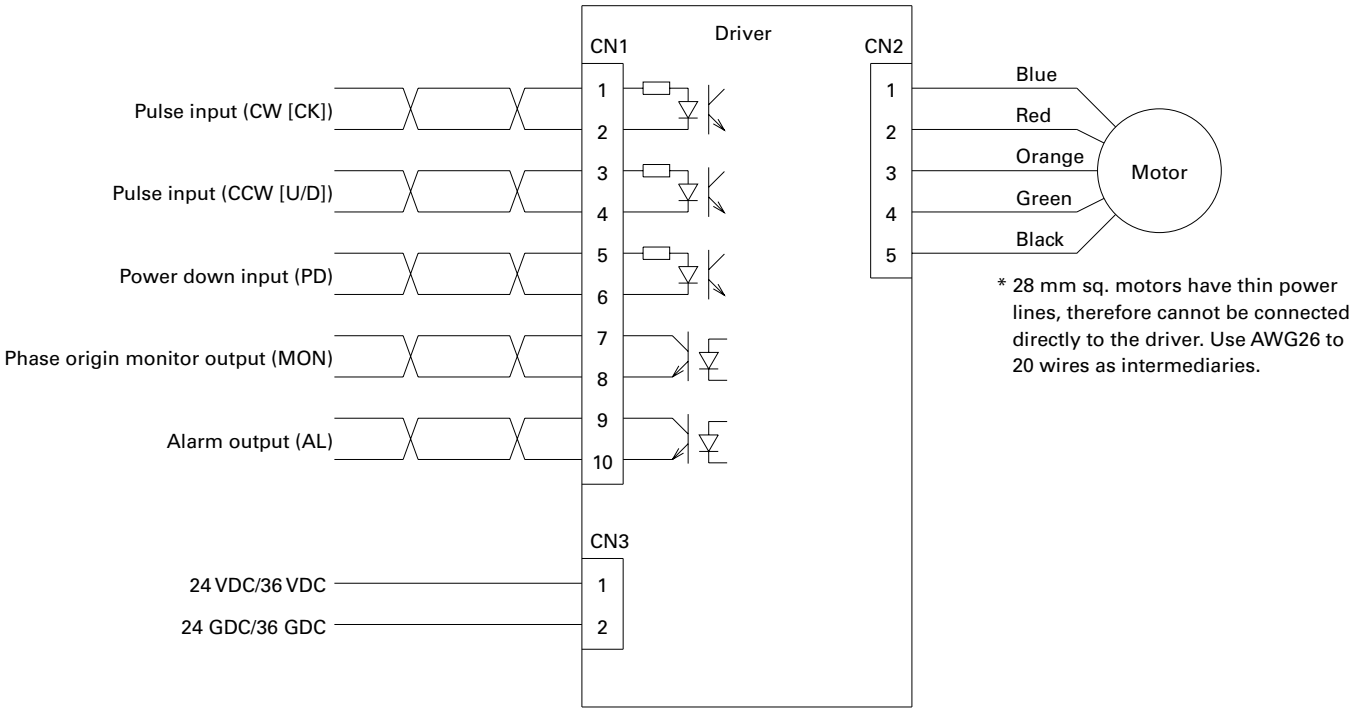
Indication	Explanation
"ALM" is displayed.	Motor cable is broken, or switching element in driver is faulty. The main circuit voltage is out of specifications range (Less than 19 VDC).

When "ALM" is displayed, the winding current of the stepping motor is cut off and it is in a "non-excitation" state. At the same time, an output signal (photocoupler ON) is transmitted from the alarm output terminal (AL) to an external source. When the alarm circuit is operating, this state is maintained until it is reset by switching on the power supply again. When an alarm condition has occurred, please take corrective actions to rectify the cause of the alarm before switching on the power supply again.

Downloaded from Arrow.com.

Connections and Signals

External wiring diagram



* 28 mm sq. motors have thin power lines, therefore cannot be connected directly to the driver. Use AWG26 to 20 wires as intermediaries.

Applicable wire sizes

Part	Wire sizes	Allowable wire length
For power	AWG22 (0.3 mm²)	2 m max.
For input/output signal	AWG24 (0.2 mm²) to AWG22 (0.3 mm²)	2 m max.
For motor	AWG26 (0.12 mm²) to AWG20 (0.5 mm²)	Under 3 m

When bundling wire together or running wires through duct, take reduction rate of each wire allowable current into consideration.
When ambient temperature is relatively high, wire product lifetime is reduced due to heat deterioration.
When extending the motor line, use as thick a wire as possible.

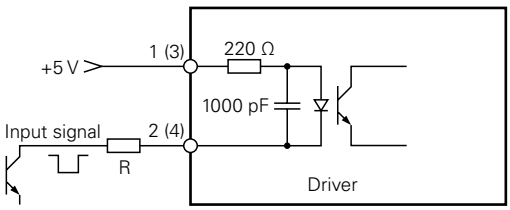
Specification summary of input/output signals

Signal name	CN1 Pin number	Function summary
CW pulse input (standard)	1 2	When in "2-input type", input the drive pulse that rotates in a CW direction.
Pulse train input	1 2	When in "1-input type", input the drive pulse train for motor rotation.
CCW pulse input (standard)	3 4	When in "2-input type", input the drive pulse train that rotates in a CCW direction.
Rotational direction input	3 4	When in "1-input type", input the motor rotational direction signal. Internal photocoupler ON ··· CW direction Internal photocoupler OFF ··· CCW direction
Power down input	5 6	Inputting the PD signal cuts OFF the current flowing through the stepping motor. Iinternal photocoupler ON ··· PD function enabled Iinternal photocoupler OFF ··· PD function disabled
Phase origin monitor output	7 8	It is turned ON when the excitation phase is at the origin (in the state when the power is turned ON) It is turned ON once per 10 pulses when setting to full step. It is turned ON once per 20 pulses when setting to half step.
Alarm output	9 10	The signal is externally output (photocoupler ON) when one of several alarm circuits operates in the PM driver. At this time, the stepping motor is in the unexcited state.

As for the motor rotational direction, CW direction is regarded as the clockwise rotation, and CCW direction is regarded as the counterclockwise rotation by viewing the motor from output shaft side.

Downloaded from Arrow.com.

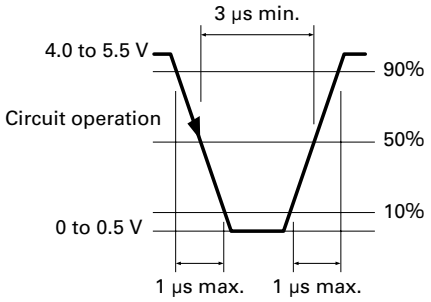
Input Circuit Configuration of CW (CK), CCW (U/D)



- Pulse duty 50% max.
- Maximum input frequency: 35 kpulse/s
- If the peak voltage of the input signal exceeds 5.5 V, please add an external current-limiting resistor R to limit the input current to around 15 mA. (Take the photocoupler forward voltage of 1.5 V into consideration.)

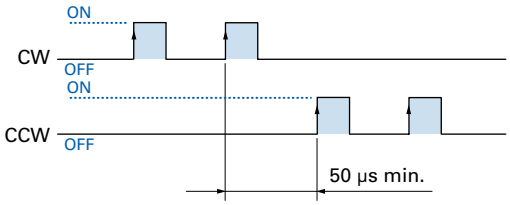
Input signal specification

〈Photocoupler type〉



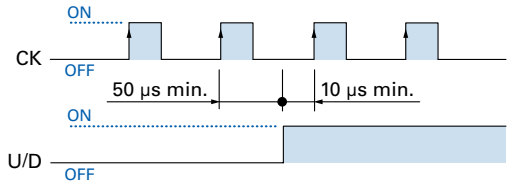
Timing of command pulse

2-input type (CW, CCW)



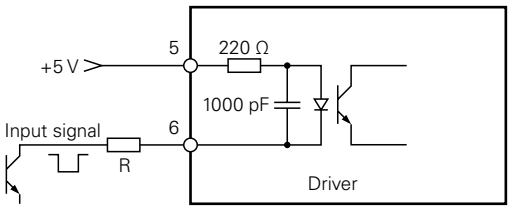
- The shaded areas in the diagram on the left indicate the internal photocoupler is ON. Internal circuit (motor) starts operating at the leading edge of photocoupler ON.
- To apply pulse to CW, set CCW side internal photocoupler to OFF.
- To apply pulse to CCW, set CW side internal photocoupler to OFF.

1-input type (CK, U/D)



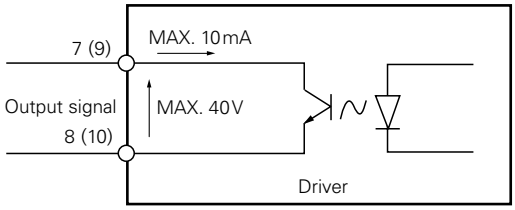
- The shaded areas in the diagram on the left indicate the internal photocoupler is ON. Internal circuit (motor) starts operating at the leading edge of CK side photocoupler ON.
- Switching of U/D input signal must be done while CK side internal photocoupler is OFF.

Input Circuit Configuration of PD

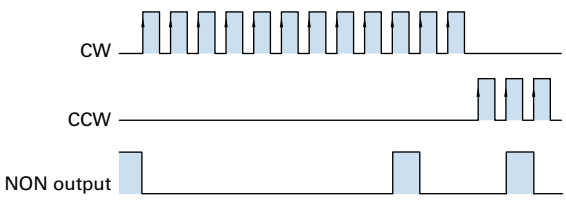


- If the peak voltage of the input signal exceeds 5.5 V, please add an external current-limiting resistor R to limit the input current to around 15 mA. (Take the photocoupler forward voltage of 1.5 V into consideration.)

Output Signal Configuration of MON, AL



MON output



Example: 1 division (Full step)

- When the motor excitation phase is at the phase origin (power ON status), the photocoupler is ON.
- MON output is taken at every 7.2 degrees of motor output shaft from phase origin.

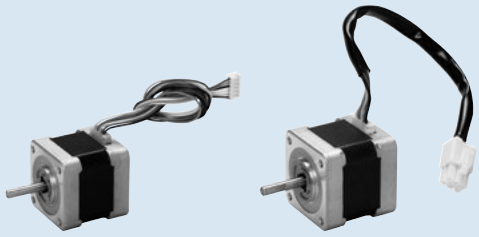
Customization

Different types of customization are possible, depending on the request and quantity. Contact us for details.

Manufacturing example

Harness modification

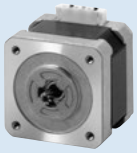
Connectors, cable ties, and plastic tubing can be added.



Shaft modification

D-cuts, key grooves, and through holes can be added; and gears and pulleys can be mounted. The shaft can also be hollowed to allow airfl ow or to pass lead wires through.

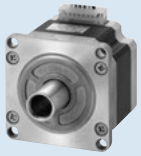
Gear modification



Pulley mounting

Adding holes

Hollow shaft



Decelerator, encoder, brake

- A decelerator can be added when a large high-load torque is required at low speeds.
- An encoder can be added in order to detect position and speed.
- A brake can be added to hold the position when the motor is stopped.

With decelerator+encoder

Rotating damper, mounting-side damper

A damper can be added to reduce vibrations when rotating.

Rotating damper

Mounting-side damper

How To Read the Specifications

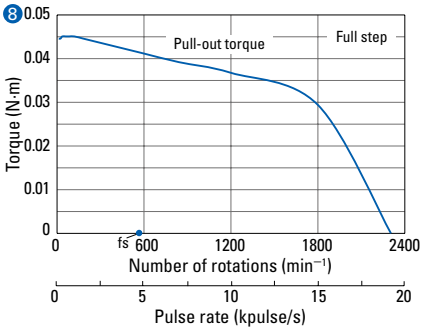
❶ Model number		❷ Holding torque at 4-phase energization	❸ Rated current	❹ Wiring resistance	❺ Winding inductance	❻ Rotor inertia	❼ Mass (Weight)	Motor length (L)
Single shaft	Dual shaft	N·m min.	A/phase	Ω/phase	mH/phase	×10⁻⁴kg·m²	kg	mm
SH5281-7241	**SH5281-7211**	0.041	0.75	1.05	0.44	0.01	0.11	32
SH5285-7241	**SH5285-7211**	0.078	0.75	1.15	0.64	0.022	0.2	51.5

Characteristics diagram

SH5281-7241
SH5281-7211

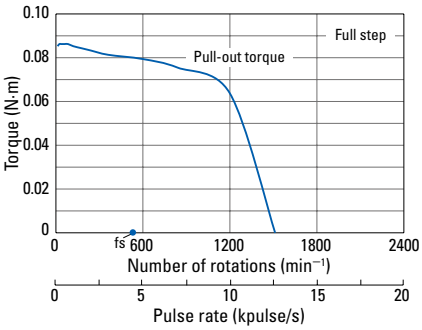
Constant current circuit
Source voltage: 24 VDC
Operating current:
0.75 A/phase, 4-phase, energization (full step)
J_L=0.01×10⁻⁴kg·m²
(pulley balancer method)
fs: Maximum self-start frequency when not loaded

❽



SH5285-7241
SH5285-7211

Constant current circuit
Source voltage: 24 VDC
Operating current:
0.75 A/phase, 4-phase, energization (full step)
J_L=0.01×10⁻⁴kg·m²
(pulley balancer method)
fs: Maximum self-start frequency when not loaded



❶ This is the stepping motor model number.

❷ This is the maximum torque that occurs with 4-phase excitation of the stepping motor at rated current, causing the shaft to rotate from the outside.

❸ This is the rated current that flows to the motor winding. Allowing this amount of current to flow to the motor will create torque equal to the holding torque value.

❹ This is the resistance for one phase of the stepping motor winding.

❺ This is the inductance for one phase of the stepping motor winding.

❻ This is the moment of inertia of the rotor, which shows how much torque is required to cause the rotor to accelerate or decelerate.

❼ This is the mass (weight) of the stepping motor.

❽ This graph shows the relationship between the full step pulse rate (frequency), speed, and pull-out torque.

Linear Actuator Stepping Motors

Features

- System Miniaturization
  This product incorporates a ball screw inside the stepping motor to make it compact. This allows equipment size to be reduced.
- Large Thrust
- Long Stroke Length

Application

Semiconductor manufacturing equipment, general industrial machinery, machine tools application and transport equipment.

Please make sure to prepare linear guide structure with non-rotating mechanism to support radial load and prevent screw shaft from rotating. It is mandatory to generate linear motion.

Specifications

Model number	SL5421-7241	SL5421-72XB41	SL5601-8241	SL5601-82XB41
Brake	Without	With	Without	With
Motor size	42 mm		60 mm	
Rated current	0.75 A/phase		1.4 A/phase	
Stroke	50 mm		80 mm

Stepping Motors for Vacuum Environments

Customized Products

Features

- These stepping motors can be driven in a vacuum environment without requiring a vacuum feedthrough. Use as vacuum-compatible actuators while retaining the stepping motor benefits of easy high-precision open-loop control.
- We can customize for a wide range of environment pressures, from low to ultra-high vacuums.
- Available baked at 200˚C.
- Size is similar to that of typical stepping motors.

Intended Operating Pressure

Low vacuum			Medium vacuum			High vacuum				Ultra-high vacuum				
10^{5}	10^{4}	10^{3}	10^{2}	10^{1}	1	10^{-1}	10^{-2}	10^{-3}	10^{-4}	10^{-5}	10^{-6}	10^{-7}	10^{-8}	[Pa]

Applications

Ideal for the following applications. Contact us to discuss your particular application environment needs.

- Semiconductor manufacturing equipment
- Satellite robotics
- Electron microscopes
- Large-scale research facilities such as accelerators, synchrotron radiation analysis equipment, etc.

Motor size

42 mm sq. to 86 mm sq.

Downloaded from Arrow.com.

Safety Precautions

The products in this catalog are designed to be used with general industrial devices. When using them, pay sufficient attention to the following points.

- Read the Operation Manual thoroughly prior to placement, assembly and/or operation in order to use the product properly.
- Refrain from modifying or processing the product in any way.
- Contact us or your point of sale for placement or maintenance services of the product.
- Regarding the following uses of the product, contact us or your point of sale for the special care required for operation, maintenance and management such as multiplexing the system, installing an emergency electric generator set, and so forth.

❶ Use in medical equipment that may have an effect on human life or the human body
❷ Use in transportation systems or transport-related equipment such as trains or elevators, that may have an effect on human life or the human body
❸ Use in computer systems that may have an impact on society or on the public
❹ Use in other devices that have a major impact on human safety or on maintaining public operations

- In addition to the above, contact us or your point of sale for use in an environment where vibrations occur, such as in automobiles or transport.
- For use in space, aviation, or nuclear power-related applications, contact us or your point of sale.
- The products shown in this catalog are subject to Japanese Export Control Law. Diversion contrary to the law of exporting country is prohibited.

Safety Precautions

Indication by (Warning Label) on the Product

Either or all of the following indications are expressed by the Warning Labels depending on the type of driver or stepping motor.

This label is affixed near high voltage parts such as the electrically charged or cover-protected section, warning of the places where it is likely to cause an electric shock.

This label is affixed near the GND terminals of the driver for which grounding is required, recommending that the terminals should be well grounded.

This label is affixed for the driver to which the power source is applied in the voltage exceeding the safety standard, drawing attention to the risk of the electric shock.

Indicates that the stepping motor may get hot, resulting in burns.

Indicates that the stepping motor should be grounded.

Safety Ranks of the Cautions

Following four ranks are provided.

Improper operations or use is most likely to result in serious injury or death.

Improper operations or use is likely to result in average or minor injury, or in property damage.

In spite of the cautions with the ⚠CAUTION label, it may cause serious results.
Either the contents or the labels is describing important cautions to be followed inevitably.

Indicates what must not be done.

Indicates what must be done.

Downloaded from Arrow.com.

⚠ DANGER

General matters

1. Do not use the product in an explosive, flammable or corrosive atmosphere, watery place or near a combustible material. Doing so may cause injury or fire.
2. Have a person with expert knowledge on hand for performing the transportation, placement, wiring, operation, maintenance or inspection of the product. Without such knowledge, it may cause an electric shock, injury or fire.
3. Do not work on wiring, maintenance servicing or inspection with the electric power on. Perform either of those five minutes after turning the power off. Failure to do so may cause an electric shock.
4. When the protective functions of the product is activated, turn the power off immediately and eliminate the cause. If continuing the operation without eliminating the cause, the product may operate improperly and cause injury or a breakdown of the system devices.
5. Stepping motor may run out of order when operating and stopping depending on the magnitude of the load. Put the product into use after confirming with the adequate trial test operation in the maximum load conditions that the product operates reliably. Doing otherwise may cause a breakdown of the system. (Should the product run out of order in the use to drive upward/downward, it may cause a fall of the load.)
6. Do not touch the internal parts of the driver. Doing so may cause an electric shock.

Wiring

7. Do not connect the stepping motor directly to a commercial power outlet. Doing so may cause an electric shock, injury or fire. Power should be supplied to the stepping motor through the driving circuit (except for synchronous motors).
8. Use an electric power source within the rated input voltage. Using otherwise may cause fire or an electric shock.
9. Connect the driver and stepping motor to the ground. Using without grounding may cause an electric shock.
10. Do not harm, forcibly put a stress, or load a heavy article on the cable or get it caught between the articles. Doing so may cause an electric shock.
11. Perform wiring with the power cable as instructed by the wiring diagram or the Operation Manual. Doing otherwise may cause an electric shock or fire.
12. Do not move the stepping motor cable, as it is not a movable cable. Doing so may result in electric shock, injury, or fire.

Operation

13. Be sure not to touch the rotating part of the stepping motor during its operation. Touching it may cause injury.
14. Do not reach or touch the electric terminals while electric power is on. Doing so may cause an electric shock.
15. Never disconnect any of the connectors while electric power is on. Doing so may cause an electric shock and corruption.
16. Do not operate this product with live parts exposed. Doing so may result in electric shock.
17. If smoke, fire, unusual smells, or unusual sounds are produced from the driver or stepping motor, turn off the power and stop using this product immediately. Not doing so may result in electric shock, injury, or fire.

⚠ CAUTION

General matters

1. Prior to placement, operation, maintenance servicing or inspection, be sure to read the Operation Manual and follow the instructions to perform. Failure to follow the instructions may cause an electric shock, injury or fire.
2. Do not use the driver or the stepping motor in conditions that exceed the specification values. Doing so may cause an electric shock, injury or fire.
3. Do not insert a finger or an object into the opening of the product. Doing so may cause an electric shock, injury or fire.
4. Do not use a damaged driver or stepping motor. Doing so may cause injury, fire or the like.
5. Use the driver and stepping motor in the designated combination. Using otherwise may cause fire or a trouble.
6. 6. Be careful when the temperature rises in the operating driver, stepping motor or peripheral devices. Failure to be careful may cause a burn.
7. Never disassemble, repair, modify, or remanufacture this product. Doing so may result in electric shock, injury, or fire.
8. Do not remove the rating plate. Using this product with an incorrect rating may result in fire.
9. Be careful that this product does not fall or tip over when handling, as this can be dangerous.

Unpacking

10. Confirm that the bottom and top of the box are facing correctly while unpacking. Failure to do so may cause injury.
11. Confirm that the product is the one that you have ordered. Installing an incorrect product may cause a breakdown.

Wiring

12. Do not measure the insulation resistance or dielectric voltage of the product. Doing so may cause a breakdown. Contact us or your point of sale instead, if such a measurement is required.
13. Perform wiring conforming to the technical standards of electric facility or the internal rule. Doing otherwise may cause burning or fire.
14. Ensure that wiring has been correctly done. Incorrect wiring may cause the stepping motor to run out of control, resulting in injury.
15. Insulate the attached condenser and external resistance connection terminals. Failure to do so may cause an electric shock.

Placement

16. Do not climb or attach a heavy article on the product. Doing so may cause injury.
17. Make sure that the intake and exhaust ports are not blocked or stuffed by foreign particles. Doing so may cause fire.
18. Make sure to use the specified driver mounting direction. Failure to do so will result in product failure.
19. Keep a distance as instructed by the Operation Manual for the driver from the inner surface of the control console or other devices. Failure to do so may cause trouble.
20. Place the product with great care so as to prevent from danger such as a tumble or a turnover.
21. Mount the product on an incombustible material such as metal. Failure to do so may cause fire, injury, or device breakdown.
22. Do not place combustible material around this product. Failure to do so may result in fire or burns.
23. Be sure to provide an adequate ventilation path when installing this product, and do not block the intake and exhaust ports. Failure to do so may result in electric shock, fire, or device breakdown.
24. Confirm the rotating direction before connecting with the mechanical device. Failure to do so may cause injury or a breakdown.
25. Do not touch the motor output spindle (including the key slot and gears) with your bare hand. Doing so may cause injury.
26. Make sure not to apply force to the lead wire or cables.

Operation

27. The stepping motor is not equipped with any protective device. Take protective measures using an over-current protective relay, a ground fault interrupter, a protective device from excess temperature, and an emergency stopping device. Failure to do so may cause injury or fire.
28. Do not touch the product for a period after the power is on or has been turned off, since the driver and stepping motor remain at a high temperature. Doing so may cause burns. In particular, the temperature rises considerably of the stepping motor depending on the operating conditions.
    Do not allow the motor surface to exceed the following temperatures:
    - Thermal class F (+155°C) stepping motors: 125°C
    - Thermal class B (+130°C) stepping motors: 100°C
    - Regardless of thermal class, encoder equipped stepping motors: 85°C, stepping motors with built in drivers: 70°C, stepping

Downloaded from Arrow.com.

motors for vacuum environments: 150°C

29. Stop operations immediately when an emergency occurs. Failure to do so may cause an electric shock, injury or fire.
30. Do not change adjustment to an extreme, for such a change results in unstable operation. Doing so may cause injury.
31. During trial operations, firmly stabilize the stepping motor, and confirm operations by disconnecting from the mechanical system before connecting with it. Failure to do so may cause injury.
32. When the alarm has been activated, eliminate the cause and ensure safety before resuming operations. Failure to do so may cause injury.
33. When the electric power recovers after a momentary interruption, do not approach the devices because the system may restart operation by itself. (Set the system so as to secure the safety even when it restarts on such occasions.) Failure to do so may cause injury.
34. Confirm that the electric power supply properly conforms to the product specifications. Failure to do so may cause a breakdown.
35. The brake mechanism of the motor with the electro-magnetic brake is used to hold the movable section and the motor position. Do not use it as a safety measure. Doing so may cause the breakdown of the system.
36. Firmly stabilize the key when operating the motor with the key individually. Failure to do so may cause injury.

Maintenance

37. Be careful when performing maintenance services or inspection regarding the temperature which rises highly in the driver and stepping motor frame. Failure to do so may cause burns.
38. It is recommended to replace the electrolytic condenser of the driver with a new one for securing the preventive measure after using for 5 years (the expected life in an average operating environment of 40°C). The expected life of the fuse is 10 years in an average operating environment of 40°C. Thus, periodical replacement is recommended.
39. Contact us or your point of sale for repair. If the product is disassembled by the user, it may become inoperable.

Transportation

40. Handle the product with care during transportation so as to prevent from dangers such as tumbling or overturning.
41. Do not hold with the cable or the motor spindle. Doing so may cause trouble or injury.

Retirement

42. When scrapping the driver or stepping motor, handle it as general industrial waste.

PROHIBITED

Storage

1. Avoid storing this product in places exposed to rain or water drops, or in an environment with hazardous gas or liquid. Failure to do so may cause trouble.

Maintenance

2. Do not disassemble or repair the product. Doing so may cause fire or an electric shock.

General matters

3. Do not remove the rating plate. Using this product with the incorrect rating may result in fire.

COMPULSORY

Storage

1. Store the product in a location that is not exposed to sunlight, at a temperature and humidity within the product specifications.
2. If the driver has been stored for a long period (3 years or longer as a general guide), contact us. The capacitance may have decreased with the electrolytic condenser due to the long period storage, which may cause trouble.

Operation

3. Install an external emergency stop circuit to turn the power off in the event that operation must be instantly halted.
4. Operate this product within the specified ambient temperature and humidity.

Transportation

5. Excess loading of the product on the carrier may cause the load to fall in pieces. Follow the instructions given outside the package.

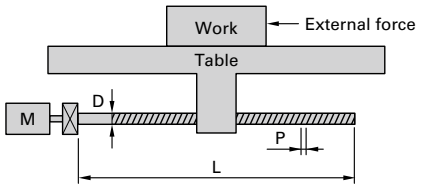
■Selection materials for each mechanism

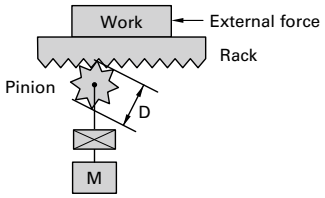
The diagrams below depict representative mechanisms and the points used in their selection. Notify us of the information shown here when requesting us to make a selection.

Ball screw



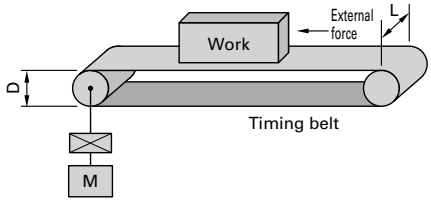
External force	F	N
Weight of work+table	W	kg
Ball screw diameter	D	m
Ball screw length	L	m
Ball screw lead	P	m
Ball screw material specific gravity	ρ	kg/m^3
Friction coefficient	μ	
Gear ratio*	G	
Mechanical efficiency	η	

Rack and pinion



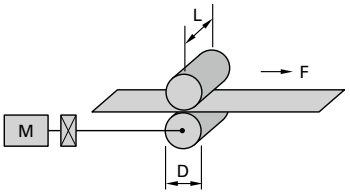
External force	F	N
Work+rack weight	W	kg
Pinion diameter	D	m
Pinion thickness	L	m
Pinion material specific gravity	ρ	kg/m^3
Friction coefficient	μ	
Gear ratio*	G	
Mechanical efficiency	η	

Belt drive



External force	F	N
Work+belt weight	W	kg
Pulley diameter	D	m
Pulley width	L	m
Pulley material specific gravity	ρ	kg/m^3
Pulley moment of inertia	J	kg・m^2
Gear ratio*	G	
Mechanical efficiency	η	

Roll feed



Sheet tension	F	N
Roll diameter	D	m
Roll width	L	m
Roll material specific gravity	ρ	kg/m^3
Roll moment of inertia	J	kg・m^2
Gear ratio*	G	
Mechanical efficiency	η	

Rotary table

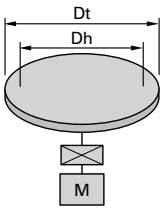


Table weight	W	kg
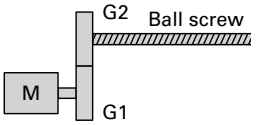
Table diameter	Dt	m
Table support diameter	Dh	m
Table moment of inertia	J	kg・m^2
Support area friction coefficient	μ	
Gear ratio*	G	
Mechanical efficiency	η	

*How to find the gear ratio (G)



$$G = \frac{\text{Number of ball screw gears (G2)}}{\text{Number of motor gears (G1)}}$$

■ Precautions For Adoption

Failure to follow the precautions on the right may cause moderate injury and property damage, or in some circumstances,could lead to a serious accident. Always follow all listed precautions.

⚠ Cautions

- Read the accompanying Instruction Manual carefully prior to using the product.
- If applying to medical devices and other equipment affecting people's lives, please contact us beforehand and take appropriate safety measures.
- If applying to equipment that can have significant effects on society and the general public, please contact us beforehand.
- Do not use this product in an environment where vibration is present, such as in a moving vehicle or shipping vessel.
- Do not perform any retrofitting, re-engineering, or modification to this equipment.
- The products presented in this catalog are meant to be used for general industrial applications. If using for special applications related to aviation and space, nuclear power, electric power, submarine repeaters, etc., please contact us beforehand.

*For any question or inquiry regarding the above, contact our Sales Department.
