DESCRIPTION

The LCX573 is a low voltage CMOS OCTAL D-TYPE LATCH with 3 STATE OUTPUT NON INVERTING fabricated with sub-micron silicon gate and double-layer metal wiring C^2MOS technology. It is ideal for low power and high speed 3.3V applications; it can be interfaced to 5V signal environment for both inputs and outputs.

These 8 bit D-Type flip-flops are controlled by a latch enable input (LE) and an output enable input ($\overline{OE}$).

While the LE input is held at a high level, the Q outputs will follow the data input precisely.

When the LE is taken low, the Q outputs will be latched precisely at the logic level of D input data.

While the ($\overline{OE}$) input is low, the 8 outputs will be in a normal logic state (high or low logic level) and while high level the outputs will be in a high impedance state.

It has same speed performance at 3.3V than 5V, AC/ACT family, combined with a lower power consumption.

All inputs and outputs are equipped with protection circuits against static discharge, giving them 2KV ESD immunity and transient excess voltage.
