TGA4954-SL

Product Description

The TriQuint TGA4954-SL is part of a series of surface mount modulator drivers suitable for a variety of driver applications and is compatible with Metro MSA standards.

The TGA4954-SL consists of two high performance wideband amplifiers combined with off chip circuitry assembled in a surface mount package. A single TGA4954-SL placed between the MUX and Optical Modulator provides OEMs with a board level modulator driver surface mount solution.

The TGA4954-SL provides Metro and Long Haul designers with system critical features such as: low power dissipation (1.1W at $V_o = 6V$), low rail ripple, high voltage drive capability at 5V bias (6 V amplitude adjustable to 3 V), low output jitter, and low input drive sensitivity (250mV at $V_o = 6V$).

The TGA4954-SL requires external DC blocks, a low frequency choke, and control circuitry.

Evaluation boards available upon request.

Lead Free & RoHS compliant.

1. Remove Vdd.
2. Remove Vg1, Vg2, Vctrl1 and Vctrl2 in any sequence.

General Comments for Production Operation of TGA4954-SL:

1. Due to natural variations in gate voltages observed with GaAs FET amplifiers used internally to the TGA4954-SL, optimal eye performance is obtained when the gate voltages (Vg1 and Vg2) are set to control desired drain currents (Id1 and Id2T)
2. Vc2 feedback circuit recommended for output amplitude correction.

Recommended Surface Mount Package Assembly

Proper ESD precautions must be followed while handling packages.

Clean the board with acetone. Rinse with alcohol. Allow the circuit to fully dry.

TriQuint recommends using a conductive solder paste for attachment. Follow solder paste and reflow oven vendors' recommendations when developing a solder reflow profile. Typical solder reflow profiles are listed in the table below.

Hand soldering is not recommended. Solder paste can be applied using a stencil printer or dot placement. The volume of solder paste depends on PCB and component layout and should be well controlled to ensure consistent mechanical and electrical performance. *This package has little tendency to self-align during reflow.*

TriQuint recommends using no-clean solder for the TGA4954-SL. If cleaning is required, then de-ionized water or isopropyl alcohol solutions are acceptable.
