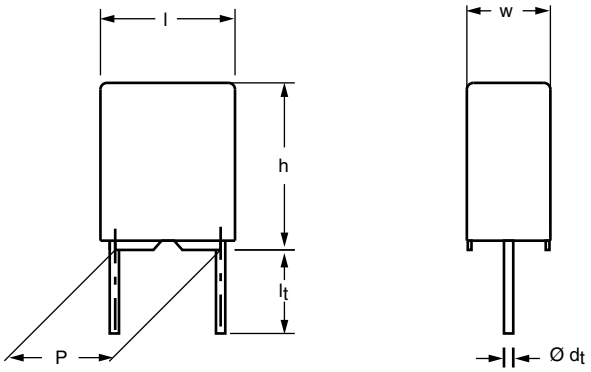
Series Impedance Film Capacitors
Radial Potted Type



APPLICATIONS
Based on long term capacitance stability and good self-healing properties, these capacitors are intended for applications in series with the mains acting as voltage-dividing impedance.
These capacitors are not allowed to be used as across-the-line capacitors.

REFERENCE SPECIFICATIONS
IEC 60384-14

PERFORMANCE GRADE
Grade 1 (long life)

MARKING
C-value, tolerance, rated voltage, manufacturer's type, code for dielectric material, manufacturer's location, manufacturer's logo, year and week

DIELECTRIC
Polyester film [1]

ELECTRODES
Metallized electrodes

CONSTRUCTION
Series construction

RATED AC VOLTAGE
AC 275 V; 50 Hz to 60 Hz

PERMISSIBLE DC VOLTAGE
DC 400 V

Notes
[1] For pitch = 15 mm, C < 15 nF, dielectric is polypropylene
[2] 27.5 mm pitch parts - in progress

FEATURES
- 10 mm to 27.5 mm lead pitch [2]
- Supplied loose in box, taped on ammopack or reel
- Compliant to RoHS Directive 2002/95/EC

Pb-free
e3
RoHS COMPLIANT

ENCAPSULATION
Plastic case, epoxy resin sealed, flame retardant (UL-class 94 V-0)

CLIMATIC TESTING CLASS ACC. TO IEC 60068-1
55/105/56/B

CAPACITANCE RANGE AND TOLERANCE [2]
E6 series 0.01 µF to 2.2 µF, tolerance ± 20 %
E12 series 0.01 µF to 2.2 µF, tolerance ± 10 % and ± 5 %
Preferred values acc. to E6

LEADS
Tinned wire

RATED TEMPERATURE
110 °C

MAXIMUM APPLICATION TEMPERATURE
105 °C

MOUNTING

Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.
For detailed tape specification refer to “Packaging Information” www.vishay.com/doc?28139

Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that the stand-off pips are in good contact with the printed-circuit board:

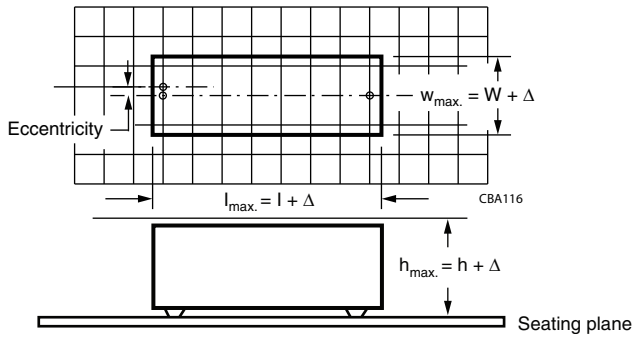
- For pitches ≤ 15 mm capacitors shall be mechanically fixed by the leads
- For larger pitches the capacitors shall be mounted in the same way and the body clamped

Space Requirements on Printed Circuit Board

The maximum space for length ($l_{max.}$), width ($w_{max.}$) and height ($h_{max.}$) of film capacitors to take in account on the printed-circuit board is shown in the drawings.

- For products with pitch ≤ 15 mm, $\Delta w = \Delta l = 0.3$ mm; $\Delta h = 0.1$ mm
- For products with 15 mm < pitch ≤ 27.5 mm, $\Delta w = \Delta l = 0.5$ mm; $\Delta h = 0.1$ mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.



SOLDERING CONDITIONS

For general soldering conditions and wave soldering profile, we refer to the application note:
“Soldering Guidelines for Film Capacitors”: www.vishay.com/doc?28171

Storage Temperature

- Storage temperature: T_{stg} = - 25 °C to + 40 °C with RH maximum 80 % without condensation

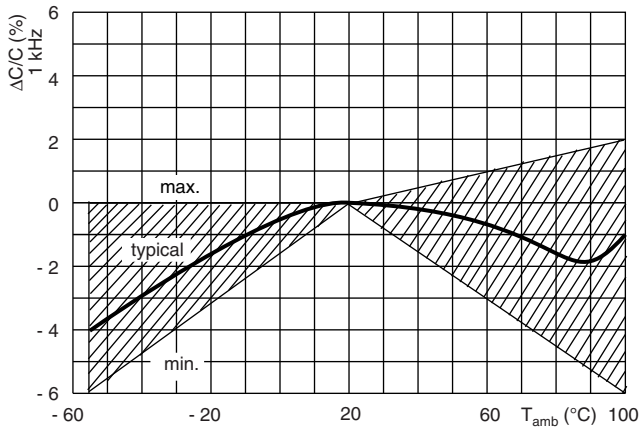
Ratings and Characteristics Reference Conditions

Unless otherwise specified, all electrical values apply to an ambient temperature of 23 °C ± 1 °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of 50 % ± 2 %.

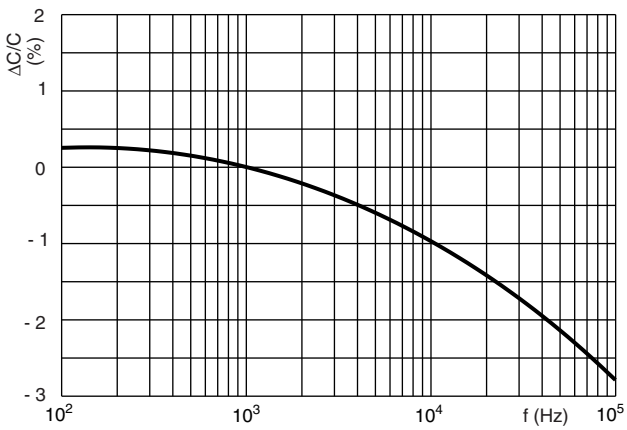
For reference testing, a conditioning period shall be applied over 96 h ± 4 h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

CHARACTERISTICS

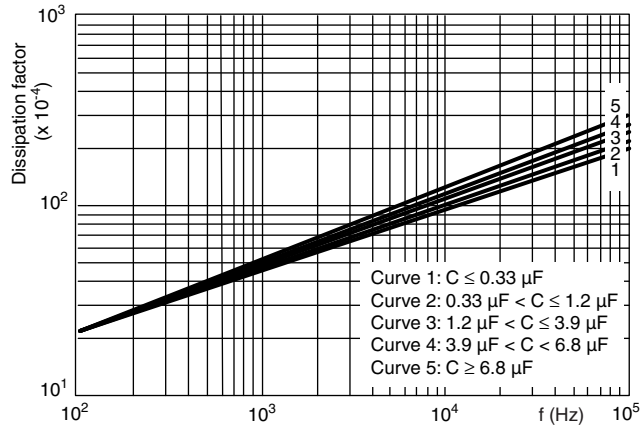
Capacitance change as a function of free air temperature (typical curve)



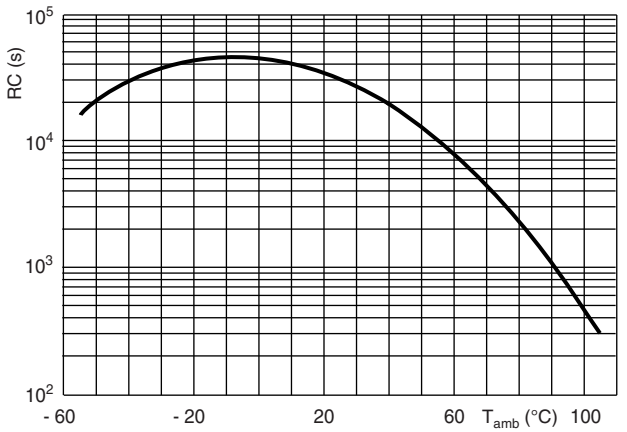
Capacitance change as a function of frequency (typical curve)



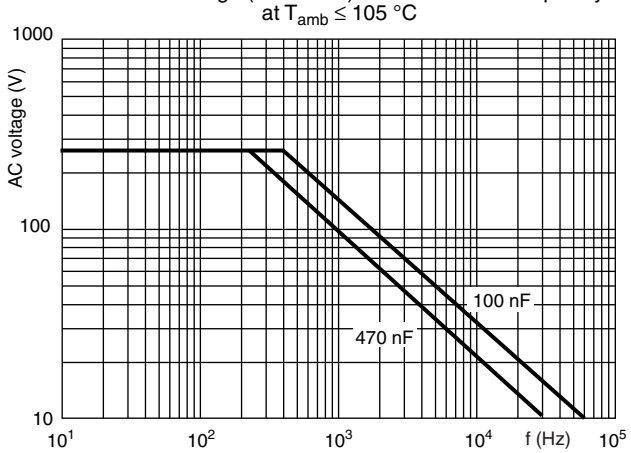
Tangent of loss angle as a function of frequency (typical curves)



Insulation resistance (RC) as a function of ambient free air temperature (typical curve)



Max. RMS voltage (sine wave) as a function of frequency at $T_{amb} \leq 105$ °C



APPLICATION NOTES

- These capacitors are suitable for the application as voltage-division impedance in series with the mains (50 Hz/60 Hz) with a maximum mains voltage of U_{RAC}.
- For capacitors connected in parallel, normally the proof voltage and possibly the rated voltage must be reduced. For information depending of the capacitance value and the number of parallel connections contact: dc-film@vishay.com
- These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described under item 7. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.
- The peak voltage (U_p) shall not be greater than the permissible DC voltage (U_{RDC}).
- The peak-to-peak voltage (U_{p-p}) shall not be greater than $2\sqrt{2} \times U_{RAC}$ to avoid the ionization inception level.
- The voltage peak slope (dU/dt) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by U_{RDC} and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left(\frac{dU}{dt}\right)^2 \times dt < U_{RDC} \times \left(\frac{dU}{dt}\right)_{rated}$$

- T is the pulse duration
- The rated voltage pulse slope is valid for ambient temperatures up to 105 °C.
- The maximum component surface temperature must be lower than 105 °C.
- Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in the table: “Heat conductivity”. This is normally fulfilled by the impedance of the device in series with capacitor or by an additional resistor.
